THE BARK REPORT

Compulsory Incompetence
in
Maths and English
and
What We Can Do About It

What's in a Name

The Bullock Report (England) :   *Weighty and Voluminous*

The Bark Report   (Australia):   *K-9 Alarm*

Hopefully, the present Education Minister, John Aquilina, will do more than just casting his eagle eye over the concrete material presented, because that's exactly what is needed to arrive at the goals already determined.

NSW'S EDUCATION GOALS:
AGENDA '97.
Getting the foundation right.
Excellence in teaching and learning.
Partnerships in public education.
Safe, challenging and creative schools.
A fair go for all.

"Our commitment to equity remains undiminished."
Education Minister John Aquilina.

Author's Background
Born 20.12.1928

1. **H.S.C. (Holland)**   1947
   4 Unit Maths, Mechanics, Technical Drawing
   Physics, Chemistry, Biology, Political Economy,
   History, Geography, Dutch, English, French,
   German, Art, P.E.
2. Certificate of Ability, Nautical College   Holland, 1949
3. Diploma 3rd. Mate, Sea Going Trade   Holland, 1951
4. Diploma 2nd. Mate, Sea Going Trade   Holland, 1954
5. Spanish   Commercial Correspondence   Holland, 1954
6. French   Commercial Correspondence   Holland, 1958
7. English   Commercial Correspondence   Holland, 1961
8. Language Studies: Friesian, Italian, B.A. French
9. High School Teacher: English & French   Holland, 2yrs
10. High School Teacher   Australia, 14yrs

De La Salle, Ashfield
   Latin, French & English.

St. Dominics, Kingswood
   Creative Writing, English, Subject Master Technical Drawing.

Patrician Brothers, Granville
   Creative Writing, Mathematics, Subject Master Music

Oakhill College, Castle Hill
   Creative Writing, Mathematics, Subject Master Technical
   Drawing, French, & Art

11. Insurance & Real Estate Agent (Finance).
12. Owner Builder (Rammed Earth).
13. Hawkesbury Adult Education   Creative Writing, Spanish.
14. Professional Musician   Accordion, Flamenco Guitar.
15. Author of Textbooks   English & Mathematics.
16. Private Tutor since 1976:   K-12

17. Soccer Coach

GLOBAL INDOCTRINATION

My practical Linguistic and Mathematical expertise completely satisfies the NSW Education goals set in 1997 by Education Minister John Aquilina.

My Back to Basics collection will never be equalled.

Unfortunately, **Politicians seem to Prefer Poetic Propaganda.**

Aquilina didn't even acknowledge receipt of the 600-page Bark Report.

Worse! The Prime Minister, Education Minister Piccoli and Shadow Minister Kate Ellis ignored the Highlights of it as well as the above collection on USB produced at the cost of $250,000 from the sale of my property!

Excellence in teaching and learning has now been absent for the past 50 years! The Global Indoctrination under the luring names of New Maths and New English has successfully prevented both teachers and parents from knowing any better.

The front page of the Daily Telegraph – Thursday, May 19, 2016 – sums it all up: "Education Minister's grammar guide for Dummy Teachers."

Grammar is not an isolated subject!

By copying, memorising and analysing examples of well-written work, **good grammar** is **automatically** taken care of!

A program worth watching

I want to discuss the enclosed material with the Commission. Ignoring "the Writing on the Wall" or "The Tolling of the Bells" is equivalent to ignoring the unfortunate fate of Australian children.

I expect to soon hear from the Commission because people of my 'versatile, academic and practical calibre are almost extinct.

PARENTS PROTEST!

But Beware! Only organised Revolt will Attract Attention.

Possible Actions

1. Only send your children to school 1 or 2 days per week.

2. Stop paying fees.

3. Stop raising money.

4. Ban the tuckshop.

5. Throw all homework sheets in the recycling bin.

6. Ignore request to do projects.

7. Don't buy books.

YEAR 5!!!

Why Pepole migreat Australia
Pepole came to Australia because
country is poor other pepole migrea
thier to Australia because they want
a better lfe allso they want thing
like FAXBLAC OVER Compulsory HB PENCIL ✓ 6 points ?

- Better Jobs and Pay
- Quality of life est low polution space
- Education Australia has a high Education
- pepole can bring more members of there
- Australia is a multy cultural country
- safe and clean
- climate Australias got hot parts or cold

Educational corruption

- The original **Bark Report** (1998)-an almost 600-page document-revealed the disastrous exam results in a number of Public and Private schools in the Hawkesbury area. It was sent via Kevin Rozzoli to Bob Carr. Receipt was personally acknowledged. However, it was then forwarded to Education Minister John Aquilina who obviously preferred prosaic propaganda to the findings of someone with a rather unusually versatile practical and academic career.

- In 2009, the report was sent to Federal Minister Louise Markus. I received a Christmas card; the report disappeared! *and AGAIN in 2016.!! not even acknowledged!!*

- During the recent State elections, politicians promised to employ more teachers, a clear sign that, despite the fancy educational objectives and subsequent expected outcomes with the certainty of a 2-up game on Anzac Day, many students can't properly read, spell or find the answer to 3x4.
More bushfires attract more professional firemen. To use the same reasoning in Education stems from a thoughtless emotional outburst that originates in the primitive brain because teachers are not qualified the way electricians are. Teachers are only trained to apply assumptions, opinions and arbitrary theories concocted by unpractical scholars who find it necessary to disagree with each other at the cost of simplicity. They only write reports dictated by their nocturnal hallucinations. They never write a textbook that can be readily used in the classroom.

- Employing more teachers will only mean perpetuating the commercial crap that has been inundating the schools for the last 50 years.
Forget about learning can be fun.

- Spending $14 million on extra lights outside the schools is a mere decoy!
The bottom line is that children are being used (abused) to maintain the economy.

If the Government were so concerned about the wellbeing of students, why does it ignore the following article:

A worldwide epidemic

Finland. 26% of boys and 33% of girls aged 14 report recurring or chronic low back pain which increases with age and is the third most common pain interfering with school work or leisure time.

Denmark. 39% of children report back pain lasting at least one month. Middle back pain is more common in young boys and girls, whereas middle back pain and low back pain are equally common in older children. Of those with back pain, 38% report some type of consequence, usually either visits to a medical practitioner or an impaired ability to carry out physical activities.

France. Girls report more back pain than boys do, and most report pain in the lower back.

Italy. 79% of school children(with an average age of 11.7 years) consider their school backpacks are too heavy, and 34% carry more than 30% of their bodyweight at least once a week (a nearly 10 kilo bag for a 30 kilo child). This is proportionally more than the limits proposed for adults in Italy. 65.7% of young people said backpacks cause fatigue and 46.1% said they cause back pain.

New Zealand. Third-form students carry an average of 13.2% of their body weight in their schoolbags, while sixth-form students carry an average of 10.3% of their body weight:

13 kg

A new type of convict: mental and physical abuse.

There is no need to take books to school. Why should students have to carry a 600-page Maths book if only 1 or 2 pages are needed?

As a matter of fact, we don't need books at all!

The **Back to Basics** collection (33 e-books) shows clearly that all scholastic material for both Primary- and Secondary schools can **now** be presented on **one DVD!** **The advantages are enormous.**

- No more back-breaking bags.
- No more expensive books.
- No need to destroy a whole forest.

4

NEW MATHS & NEW ENGLISH

An Educational Holocaust approved by the Board of Studies.

- Compulsory, Commercial do-it-yourself Courses Consisting of pages and pages with puzzles, Cartoons, trivia and topics that should be left to parents.
- Immature opinions, likes and dislikes or answering trite questions are obscured by atrocious writing in a playground vernacular without punctuation and fraught with spelling mistakes.
- Filling in the gap exercises are traps to make mistakes.
- Pre-School-level narratives with multicultural names and subliminal advertising are designed to maximise consumer indoctrination.
- Some children in year 6 still use their fingers to work out that Ten Take Two is eighT.
- Many year 12 students mix up perimeter & area!
- Since eyes are more reliable than IQ, images better than words and showing better than telling, copying definitions or instructions is a waste of time, especially when they are illegible.
  However, if, despite that indisputable wisdom, **there is a deliberate attempt** to cause most students to score less than 50% in their Maths tests as the result of modern, mind-boggling complexities, then many Australians will eventually be semi-illiterate, innumerate consumers, **because Commercial Education is a smiling bullet!**
- Since my pioneering work has been consistently ignored, I'm now convinced that Ministers are Merely Manipulated Marionettes in the Global Monetary circus; they only want More Money for their Masters although all subjects for Primary-and Secondary School can fit on one single USB!

The Hon Andrew Refshauge MP; *0428 396 120* Cattai, July 2004
Minister for Education   *25* Reedy Road, 2756

Dear Sir,

Mental Massacre in the Maths Class

Einstein urged us to keep questioning. I did. However, the Educational Hierarchy is like Antarctica: Frozen.
Consequently, schools do not prepare students for the workforce as originally intended.

Eminent people have warned us:

1. From: **Assumptions underlying Australian Education by R. Freeman Butts, Professor of Education, Teachers College, Columbia University, U.S.A (Australian Council for Educational Research: 1955)**

"The chances for new ideas, different backgrounds and widening experiences are limited in a system that breeds its own teachers in its own schools and then gives them professional training in its own teachers' colleges."

"I found relatively little concern among teachers or inspectors to re-examine fundamentally their practices or assumptions. I did not find a widespread eagerness to think hard and long about the theory of education."

2. **The Bulletin** (15 May, 1976):
Australia's Educational Scandal: We're turning out millions of dunces.

3. **Spinoza's Law:** If facts conflict with a theory, either the theory must be changed or the facts.

4. **Carl Rogers:** "If we did away with the expert, the certified professor, the certified professional and the licensed psychologist, we might open our profession to a breeze of fresh air, to a surge of creativity such it has not known for years.

12

THE LAST STRAW

23.05.2016

- Both the Gonsky leaflet and the issue of a new grammar manual have prompted me to request an early appointment with   Minister *Piccoli*

- Primary teachers are not confident teaching the 3Rs because they were never taught the direct, professional way during the 16 years they went to school.

  However, they can now become specialists themselves by using my **Back to Basics** resources. Preparing lessons will become an obsolete activity.

- I am determined to make a difference well before my expiry date!

- The enclosures have already been sent to the Prime Minister

IGNORED!

CATTAI NSW 2756

INSTEAD

Dear Mr Bark

I know this has been a long campaign. So I will be brief.

Federal elections are always close. You live in one of 14 seats where
just a few hundred votes could change the result of this election.

A vote for Labor, independents or the Greens is a roll of the dice, one that could
well result in another minority Labor Government in a hung and chaotic Parliament.

Bill Shorten as Prime Minister in a hung parliament would have Greens
and independents dictating policy to him day by day.

But with your support, we will deliver the economic security that enables Australians
to fulfil their aspirations as individuals, as families, as seniors and as communities.

Get the next three years right, and we will all be able to look forward with
confidence and optimism to an Australia where the very best is yet to come.

I am asking you to make a clear choice - to back a strong and stable Coalition
majority that can press ahead with our economic plan.

Let's see things through – for that I need you to vote for your local
Liberal, Louise Markus.

Yours sincerely

Malcolm Turnbull
Prime Minister

Re: Opposition targets shocking rural literacy.
e-Bulletin, 2.2.2011

Traditionally, the Opposition always has the answers.
Unfortunately, Piccoli-now Education Minister-is obviously not
shocked enough himself by these dismal findings because he has
ignored both the Highlights of the Bark Report and the complete
Back to Basics collection!
The Paradox: being in power has turned him powerless because he is
now part of the Global Monetary Circus!
Since Parents have the numbers, it's time to exert their real power
because compulsory Education has become Commercial
Indoctrination!
My Tutorial can improve Literacy- and Numeracy standards in less
than 1 year at no cost, whereas Gonski Funding will only benefit
Commercial Enterprise.
It's the Federation's task to launch me before it's too late! I am the
only one left who can make a real difference.

Regards,

A. Bark

0428396120

Dear John,   ↓ *instead of Gonski!*

Re: **Free Literacy and Numeracy Resources**
(to help make a difference)

North-American Indians knew how to cure scurvy. It took the British Admiralty 200 years to supply Captain Cook with citrus. Thousands of sailors died in the meantime.

Metaphorically speaking, that is exactly what's happening in our schools as far as the teaching of Maths and English is concerned because, with the ideas of Taxonomy fanatics and a Pontius Pilate-type Department of Education, Commercial Enterprise is in charge. The compulsory students have become the victims of tyranny!

With the emphasis on understanding, topics are repeated in books that keep increasing in size; from about 200 pages to 600 or 700! Questions have to be answered in a prescribed, authoritarian way that is far too complex for most students, hence the learning difficulties.

Efficiency and mental arithmetic only yield half marks **despite** the following statement: "**The Board of Studies recognises that the aims and objectives of the syllabus may be achieved in a variety of ways and by the application of many different techniques. Success in the achievement of these aims and objectives is the concern of the Board which does not, however, either stipulate or evaluate specific teaching methods.**"

My Multi-Level Text Book & Dictionary is a unique invention but was condemned by the Hierarchy!!

Basic mathematical skills can be learnt by doing the traditional topics. Adding a few others to sell new books is sabotage. By using exact subjects like Maths & Spelling to teach the principles of Professional Memory Training, performance will undoubtedly improve even as by-products as it were.

Memorising must be given back its importance. The capacity to be good at it is already diminishing.(National Geographic)

English is learnt by copying well-written- and well-spoken examples so that the use of good grammar is **automatically** taken care of.

Answering questions and doing trivial pursuit exercises only activate a limited playground vernacular.

The enclosed booklet consists of pages taken from the Bark Report. They clearly show the Educational Holocaust created by experts who lost the plot.

My Back to Basics Collection on only one USB will never be equalled.

Parents and their children have the right to benefit from its existence. Since schooling is compulsory, the **condemnation** of obviously superior lesson material is therefore unacceptable!

The NSW Teachers Federation will be given permission to copy an unlimited number, provided it is capable of getting this beautiful work introduced. Please refrain from getting it judged by a special committee. The reason should be quite clear: If Moses had been a committee, the Israelites would still be in Egypt!

For free tutorials, contact aart@designcopyprint.com.au

Copies of this letter and enclosures are also sent to ABC- and SBS channels.

20 September 2015

Dear Minister,

RE: Teaching Times Tables in Two hours

In 2003, I produced the enclosed DVD in Cattai Public Primary School (NSW).
A spokesperson of the Department informed the Headmistress that she should refrain from encouraging unauthorised material! This unexpected warning didn't really surprise me because my revolutionary Maths dictionaries had been rejected years earlier.
The now refined method of teaching Times Tables consists of first memorising 11 special groups.
The uniquely creative way of teaching answers is ideal for young students. Too much emphasis on understanding is fraught with problems because, up to the age of ten, a child's brain is only a quarter of an adult one!
(Uma história da Linguagem; edições texta grafia.)

Like Numeracy, Maths and Spelling should be taught as routine procedures by using the principles of Professional Memory Training because it has already been noted that-due to modern technology- memorising has almost become a lost skill.
By eliminating their arbitrary practical importance, students will undoubtedly do better.
With Maths, it means abandoning the classical approach including the unprofessional so-called necessary working. The average mark of topic tests (45%), not the manipulated H.S.C. ones, shows clearly how inefficient it is.
Teaching linguistic spelling strategies should instantly replace the chore of copying a list of words four times a week with the test on Friday to see how many wrong rather than how many are right!
To break through the conventional bureaucratic barriers, it needs the approval, support and vision of an enthusiastic Minister.

Ignoring new discoveries

- In 2003, I produced "Numbers in a Nutshell" in Cattai Public School. The enclosed video shows clearly that Numeracy can and therefore should be taught as a new intelligent routine because of sensational discoveries and professional memory training techniques.
  The present method based on understanding fails because, up to the age of 10, a child's brain is only a quarter of an adult one!(Uma Historia Da Linguagem)
- The day after the production, the headmistress —now a lawyer- was told by a spokesman for the Department that she should refrain from advertising unauthorised material.
- On my new DVD, please find a short tutorial demonstrating clearly that it is possible to teach times tables in 2 hours. Four local Private Schools ignored my request to produce this new phenomenon.
- In order to give parents and their children the opportunity to become aware of new knowledge so blatantly ignored or even blocked by the static, authoritarian, omnipotent teaching hierarchy, a demonstration on your channel with 10-20 invited children from years 3-6 would undoubtedly be well received.
  I hope to hear from you

The Manufacture of Needs

By KIRKPATRICK SALE   January-February 1996 ▪ *NEW DAWN*

EVER-PRESENT GENIE

Television, the most important medium of this **manipulation,** is also very **seductively selling a way of life** that declares from a whisper to a shout that consumption is good, fulfilling, fun, moral, empowering, all the certainties that are so elusive in the rest of life. It is the medium that almost perfectly expresses the **high-tech society: simplistic** and **forceful,** capable of **no complexity of thought** whatever, designed for limited and graphic impacts (best if short and violent, like football and commercials), and sending pulses continually at that psychological nexus that Freud, doctor for the consumer society, called the "pleasure principle", where desires, always created, are always insatiable.

Within less than a generation vast populations across the globe have thus been brought into the range of the **industrial monoculture,** including such formerly resistant empires as those of Russia and China, and anthropologists believe that by the twenty-first century there will not be a single culture anywhere that will have escaped its impact.

If, as the economists say, people need to consume so that our high-tech societies can produce to their capacity, how do we get them to keep on buying and using and throwing away?

EDUCATION

Integrity is antithetical to the spirit of our age. The overarching philosophy of life that guides our culture revolves around a materialistic, consumer mentality. The craving need of the moment supersedes consideration of values that have eternal significance. (Maxwell)

JUDAS

Still as of old Men by themselves are priced. For thirty pieces Judas sold himself, not Christ.

(Cholmondelay)

HISTORY REPEATS ITSELF

In a disintegrating society, it is the negative forces that show the most intense dynamism. Roman culture was choked by its material advantages. As life became mechanically disciplined, it became spiritually incoherent.

Men cannot be trusted with easy alternatives. At the moment they fancy that they are at last living like gods, they often cease even to be able to live like men.

BREAD AND CIRCUSES

In the circus there arose a different kind of spectacle. Here criminals were punished; here military captives were made to fight with each other until one or both were killed; here other prisoners were thrown to the wild beasts, to be torn apart and devoured alive. Punishment was originally a public spectacle, presumably to serve as a warning for the spectator: now it served another purpose - it provided outright pleasure. Rome under the Antonines may have harboured a million people. At least one-third and possibly one-half of the population of the city, according to Carcopino, lived on public charity.

By 354 A.D., there were 175 days of games out of some 200 public holidays. (Mumford) **83.**

Endangered Minds

"Provocative, scholarly, and timely. Society may actually be changing our children's brains for the worse."

MATHS INFORMATION

Requirements

Students will be required to have the following items to each lesson.

*A blue or black pen   *A ruler
*A red pen   *A lead pencil
*An eraser   *A Scientific calculator
*Maths textbook   *Maths workbook

Geometrical equipment will also be needed for selected topics

- a compass
- a protractor
- set squares

Book Rules ← *THE RESULT OF INCOMPETENCE*

'Assertive Discipline'

*Workbooks must be covered.
*Use a blue or black pen for writing.
*Use a red pen for margins, underlining and marking.
*Lead pencil should be used for diagrams, graphs, etc.
*A ruler should be used for straight lines.
*All worksheets are to be pasted in the work section.
*Tests are to be signed by a parent and pasted in the back of the workbook.
*Mini-reports will be sent home pasted in the workbook each term. These are to be signed by a parent.

Homework

*Students should expect about 15 minutes homework every weeknight and sometimes on weekends. If all set work is completed, students should do at least 10 minutes revision instead.
*If homework cannot be completed for a good reason, a note written by a parent should be returned the next day.
*Work missed due to absences is to be caught up as soon as possible.

To Parents

Please read the above information carefully. I hope it will help you to understand what is expected of your child in Maths this year. Please don't hesitate to contact me throughout the year if you have any questions or problems.

Thankyou

....

Parent/s signature...
Any comments?

NO, SIR, WE'RE DUMBFOUNDED!

62

Oh no, not maths!

$$\frac{3}{4} = \frac{75}{100} = 75\% \quad \text{Also} \quad \frac{3}{4} = \frac{3}{4_1} \times \frac{100^{25}}{1}\% = 75\%$$

STANDARD KNOWLEDGE

THIS IS WHY !

Maths phobia is one of the most career-damaging fears which beset working women going into the next decade.

Example 10.7
Express the following fractions as percentages:

(a) $\frac{3}{20}$ (b) $\frac{11}{300}$

(c) $\frac{5}{7}$ (d) $\frac{7}{12}$

CRAP!

Solution

(a) $\frac{3}{20} = \frac{3}{_1 20} \times \frac{100^5}{1}\%$ multiplying by $\frac{100}{1}$

$= \frac{15}{1}\%$ cancelling by 20

$= 15\%$ *MENTALLY !*

(b) $\frac{11}{300} = \frac{11}{_3 300} \times \frac{100^1}{1}\%$ multiplying by $\frac{100}{1}$

$= \frac{11}{3}\%$

$= 3\frac{2}{3}\%$ cancelling by 100 expressing the answer as a mixed number.

$\frac{5}{7} = \frac{5}{7} \times \frac{100}{1}\%$

$= \frac{500}{7}\%$

$= 71\frac{3}{7}\%$

$5 \div .07 !$

(d) $\frac{7}{12} = \frac{7}{_3 12} \times \frac{100^{25}}{1}\%$

$7 \div 12 = \frac{175}{3}\%$

$= 58\frac{1}{3}\%$

SPOON-FEEDING. NO LEARNING

As I said before, the teaching of decimals and percentages is a matter of subconscious sabotage. The committee that introduced it consisted of stale headmasters and mistresses (not their) brought up on fractions and "paybacks".

The result: Storm in a glass of water. This "weird" system had to be explained to the poor kids. Explaining means digging deep, so deep that the planted seed has no chance to come up. If you stopped a teacher from explaining, you would deprive him of his status. Maths teachers belong to a secret society that has set itself up as a sole agency. You can only become a shareholder if you adhere to the contrived, bullshit jargon which is more difficult than the actual Maths itself.

The society doesn't want too many members; only the ones of the same ilk. If everyone spoke Maths the way they speak their native language, Maths wouldn't be a high esteem subject any longer.

The famous dozen and their relatives - ½, ⅓ ¼, ¾, ⅕ ⅖,.... are used when it is convenient to do mental arithmetic. Apart from that, it is extremely futile to convert percentages, fractions and decimals, because they obviously must have the same value. *25% OF 16: THINK ¼ OF 16*

Read the following crap; no wonder frustrated kids set fire to schools.

To change a fraction to a percentage, multiply by 100/1 and include the % sign.

Only idiots would write it; those that implement it should be charged with mental abuse.

Do you write or say $^3/_1 \times 2$ apples? Of course not. So why should you write or say $^3/_1 \times 2$ sevenths? 3×2 sevenths = 6 sevenths. Written as $^6/_7$. That's practical.

Spoonfeeding: The operation is translated into English as well so that the student does not have to think; that's precisely why he never learns: teachers deny him the opportunity.

SIGN OF INCOMPETENCE:

MATHEMATICS *PROPAGANDA*

COURSE CODE	MA202 (General)

COURSE NAME	DO YOU MEASURE UP? **NO!**

KEY LEARNING AREA	MATHEMATICS

FACULTY	MATHEMATICS

PREREQUISITES	TEACHER RECOMMENDATION

ARBITRARY
BY DEFINITION:
IF HE CAN'T TEACH,
THE STUDENT DOESN'T
PERFORM TO HIS CAPACITY!

COURSE OUTLINE

Students will use units of measurement to recognise and investigate plane and solid figures. They will calculate area and perimeter and recognise, draw and measure angles and triangles. Students must bring a calculator to all lessons. Geometric instruments will be essential.

SOCCER POOL: GUESSING THE SCORE BEFORE THE GAME!

OUTCOMES

NOT ALLOWED!

WISHFUL THINKING OR FALSE ADVERTISING?

At the completion of this course, students will have:
* Performed routine calculations with whole numbers using an appropriate choice of estimation and mental, written and calculator methods.
* Used basic units for measures of time, money, temperature and space.
* Recognised the arbitrary nature of measurement units and scales.
* Described the basic properties and relationships between two and three dimensional shapes.
* Deduced simple numerical facts about common geometric figures.
* Calculated perimeters, areas and surface areas of basic shapes.
* Used geometric instruments competently.
* Estimated and used measurements in practical settings.
* Approached everyday mathematical problems confidently.

8:05B   p170   5/2/2002

<u>Clocks and times</u>

The metric base unit of time is the second (s). Units of minutes (min), hours (h), days, weeks, and years are also commonly used.

$$60 \text{ seconds (s)} = 1 \text{ minute (min)}$$
$$60 \text{ min} = 1 \text{ hour (h)}$$
$$24 \text{ h} = 1 \text{ day}$$

Important things to remember should be outlined with a red box

Label all sets of exercises as in the text book

<u>Exercises 8:05B</u>

Question numbers in the margin

1. a) $2 \text{ h} = 2 \times 60 \text{ min}$
         $= 120 \text{ min}$

AT THE COST OF MENTAL EXPERTISE.!!

b) $3 \text{ min} = 3 \times 60 \text{ s}$
     $= 180 \text{ s}$

Work DOWN the page

c) $2 \text{ days} = 2 \times 24 \text{ h}$
     $= 48 \text{ h}$

You may use a second column for work which is very thin when you have finished the left hand column. But make sure you insert two vertical red lines as a margin.

6. a) $2 \text{ h } 20 \text{ min} + 1 \text{ h } 30 \text{ min}$
         $= 3 \text{ h } 50 \text{ min}$

Mark all work

Do not confuse the question number or letter with your answer. Always use :) not a full stop

tick them

Write out question and show working DOWN the page finishing with the answer. Keep all equals signs one below the other.

Use a 2cm red margin on every page

ADMINISTRATION MORE Appendix 11 IMPORTANT THAN EXPERTISE

Bullying and Blackmail

Unfortunately, it only becomes apparent to someone who has abolished the existing authoritarian way Maths has traditionally been taught because it has stunted the performance of many students; protocol is obviously more important than education. For thirty years my private students asked me why their teachers didn't do it the direct, professional way. I would then answer that the classical way turned Maths into a high-esteem subject and that it had to do with ego-uppance. Teachers can only deliver what they have been taught themselves and that they were not intelligent or practical enough to allow for individual expertise. Neither lawyers nor politicians want to tackle the issue because the abuse is not physical but merely the result of being indoctrinated-without questioning-by the request that Maths questions must be answered in a standard and purely academic way. A quick look at the disastrous test results in this report shows clearly that this indirect approach is neither practical nor educational. The real reason for this unethical request to show the so-called necessary working (necessary to whom?) is that its very complexity is supposed to stop students from copying and, traditionally, to show where students went wrong! However, the responsibility to prevent copying lies with the teacher, not with the students; they are only guilty until caught in the act.

To discourage any mental expertise, right answer without working only yield half marks! It completely undermines the challenge Wyndham is talking about and turns the following statement issued by the Board of Studies into nothing but an blatant lie!

School of Computing,
Engineering and Mathematics

WESTERN SYDNEY
UNIVERSITY

Summer Session 2015/2016

Assignment 1

Assignment 1 — Instructions

Weighting: 25%

Total marks: 40

Due date: Week 4, 4pm, Wednesday, January 6, 2016.

Submission Details: To be submitted electronically via vUWS.

This is an individual assignment, which means that the solutions you hand in MUST be your own work.

The solutions may be hand-written or word-processed using the equation editor in WORD, for example. You MUST submit your assignment (that is the completed cover sheet and your solutions) in either WORD 2010 or PDF format, using the Assignment tab in vUWS. No other format will be accepted. Please make sure you complete the cover sheet and submit it with your solutions. A copy of the Cover Sheet can be found on page 2 of this document. Your assignment will NOT be marked if there is no cover sheet attached to your solutions.

Please note the following when submitting your solutions to these questions:

1. To gain full marks you must write a 'sentence' to answer the question where appropriate.

2. Correct spelling and grammar MUST be used where appropriate. *ISN'T THAT ALL THE TIME!*

3. Correct mathematical notation and standard setting out MUST be used.

4. Where content, such as quotes or images, is used that is *not* included in the course materials or text book, it must be appropriately referenced at the end of the assignment.

Late assignments will attract a 10% penalty per day (including Saturday and Sunday and any public holidays), beginning Thursday, January 7. Once the assignments have been returned, no further assignments will be accepted to be marked. Assignments will normally be returned within one week.

All working MUST be shown to obtain full marks for a question.

No working = NO marks!

Answers only (even the correct ones!) will also attract ZERO marks.

Marks will be deducted for poor and/or incorrect setting out.

IGNORANCE IS NOT BLISS

eachers don't know what they don't know. They obviously find it easier to indulge in their ignorant
...edness. It's easier than thinking and questioning.

... n you're in a rut, at least you know where you are.

... n one general truth can be formulated, it's extremely stupid to endlessly repeat identical details:
$x \cdot 0 = 0$, $2 \times 0 = 0$, etc.

Heaps of nothing is still nothing.

he fact that the written crap never reached the brain shows up when students have to "solve" $X \times 0$,
...ecause they haven't seen "that one" before.

...o you say 1 x one apple= 1 apple? Of course not, so why should you have to write that 1 times a
...ber = that number?

...st schoolchildren have to write times tables up to 12 even though the decimal system was
...roduced more than thirty years ago. (resistance to change)

o go as far as 15 is even sillier, apart from the fact that writing out times tables is like having to
rite 200 times, "I must not use textas".

o a keen observer-that excludes teachers – it is obvious that children are ADDING instead of
...ULTIPLYING! That's precisely why they have trouble answering random questions.

... ltiplication by 10 involves only one general rule: add a nought.

... e exclude the above stupidities and know that **a times b** is the same as **b times a**, then there are
...NLY 36 to learn. By using the Bark patterns, half 36 which is 18. Strangely enough, 3 sixes are
lso 18, and both numbers make 9, which seems to be quite logical.

1 x 0 = 0	2 x 0 = 0	3 x 0 = 0	4 x 0 =	5 x 0 = 0
1 x 1 = 1	2 x 1 = 2	3 x 1 = 3	4 x 1 =	5 x 1 = 5
1 x 2 = 2	2 x 2 = 4	3 x 2 = 6	4 x 2 =	5 x 2 = 10
1 x 3 = 3	2 x 3 = 6	3 x 3 = 9	4 x 3 =	5 x 3 = 15
1 x 4 = 4	2 x 4 = 8	3 x 4 = 12	4 x 4 =	5 x 4 = 20
1 x 5 = 5	2 x 5 = 10	3 x 5 = 15	4 x 5 =	5 x 5 = 25
1 x 6 = 6	2 x 6 = 12	3 x 6 = 18	4 x 6 =	5 x 6 = 30
1 x 7 = 7	2 x 7 = 14	3 x 7 = 21	4 x 7 =	5 x 7 = 35

218.

14
x6

The student MUST SAY "6 TIMES 4 EQUALS 24," NOT 6 FOURS, 24. He has to put down the 4, and (instead of carry), WRITE DOWN THE 2; do you know why?

Because he has to say that 6 TIMES 1 EQUALS... UM ...

(it's of course a waste of time doing algorisms if you don't readily know the basic facts.)

BY THE TIME HE COMES UP WITH THE ANSWER, HE WOULD HAVE FORGOTTEN WHAT HE HAD TO CARRY.

If you were to throw the relay baton on the ground instead of giving it to the next runner, the team would never win a race.

If schools were to run a business, they would be bankrupt within a week.

People should do algorisms with eyes and brain only because they operate with the speed of light. A calculator functions silently without crutchfigures; why shouldn't people?

Schools are in the process of turning children into gullible and non-thinking consumers under your very noses: WINNERS MAKE IT HAPPEN: LOSERS LET IT HAPPEN. AND IT WILL GET WORSE. At the moment, the drive is to keep students in school till age 18. Since keeping them in till age twenty would obviously be ridiculous, the government has invented a new trick. Although there is plenty of evidence to show that neither policies nor methods work, they are going to introduce an extra two years of teaching the same crap.

To put the fate of year 12 students in the hands of pre-school teachers who have already done so much damage is ludicrous because these people have neither foresight nor hindsight. The business world is laughing because even more crap can be produced.

BULL SHIT

THE AIMS
● Builds self-esteem, numeracy and literacy.
● Helps prevent delinquency.

Government says early lessons save big dollars

Day carers to teach tots words, sums

24!

BABIES and toddlers going to child-care centres will face a government education curriculum next year.

The aim is to teach children numeracy and literacy at an age when they learn very quickly and to form the basis for stability in their juvenile years.

It will transform child-care centres from being simply child-minding places to being part of the education system. For the first time, they will have a set education guide for pre-schoolers.

Community Services Minister Faye Lo Po said the curriculum would also develop self-esteem and confidence.

It will be offered to the 3,500 child-care centres in NSW and involve about 150,000 pre-schoolers each day.

"We want to prepare children for the future and give them the best possible start," Mrs Lo Po said.

Those who can, do
Those who can't, bully

BY TIM FIELD PHD, BSC (HONS)

Who are the bullies?

The bully, on the other hand, is usually insecure, inflexible, immature and often incompetent. They are also often prejudiced

Almost everybody has felt the destructive power of bullying at some time in their life, and whilst any people associate the word 'bully' with the playground, bullying is not just childish behaviour which people grow out of. There's much anecdotal evidence to suggest that the child who learns to bully at school and gets away with it – goes on to be a bully in the workplace. Sometimes, the school bully decides to take up teaching.

Data from over 3000 cases from the UK National Workplace Bullying Advice Line (which started operation in January 1996) shows that among the most common groups of callers are nurses and healthcare employees (around 12%), social workers (9%), and voluntary/not-for-profit sector employees (around 8%). However, the largest group by far, at around 20%, is teachers. These teachers, who work in both the state and private sectors, are not being bullied by pupils or parents. They're being bullied by fellow teachers, heads of department or, most commonly, by the principal.

legations of 'complaints' by unidentified pupils or parents are made.

When teachers bully children

And that's just bullying by adults, against adults. Anecdotal evidence from over 600 Advice Line cases suggests that the bullying teacher or principal also targets pupils and makes their lives hell as well. The tactics are dauntingly familiar. Constant nit-picking criticism is an everyday occurrence, as are unfair markings, denial of opportunities, the instillation of a belief of unworthiness, unfair use of penal sanctions, unpredictability, and the threat of discipline or force or violence (as in various forms of 'punishment'), often on fabricated charges. Alternatively, the child may be ignored for weeks, even months, at a time. Usually, the bullying teacher will focus on one child in particular and treat that child differently to all the other children. This is always a big clue, although some aggressive

How the bullies operate

Each case is the same: the bully, who is an unpopular person, selects one teacher who is good at their job and popular with the pupils and parents. The targeted teacher is then subjected to a barrage of daily criticism, nit-picking, fault-finding, increased workloads, and interference. Their reputation is undermined, they are marginalised, excluded from what is going on, and separated from colleagues. Information is withheld; impossible objectives are set and deadlines changed, often with little or no notice. Leave is denied and training refused.

Often, the targeted teacher is allocated the most difficult pupils, an impossible schedule, has their responsibility increased but their authority reduced or removed, and is humiliated and embarrassed in front of pupils by the bully's unwarranted and unnecessary intrusion into classes for trivial or specious reasons. Eventually disciplinary procedures are abused, with the imposition of verbal and written warnings for trivial reasons, which are often exaggerated or even fabricated. Sometimes unsubstantiated

adults will bully every child. Sometimes there are suspicions of other forms of abuse, especially with male bullies.

One of the nastiest tactics of bullies is to isolate their target and then encourage others to join in with the bullying. The target is portrayed as 'weak' and a 'threat' to the group, thus 'legitimising' the bullying behaviour. In reality, the bully is projecting his or her own weakness onto someone else in order to divert attention away from their own shortcomings.

Who are the victims?

It's often thought that people who are bullied must be 'weak' and 'inadequate'. In fact, it is often the bully who is weak and inadequate, for normal people don't need to bully. The bully will select their target according to certain predictable criteria. The targeted individual is invariably good at their job or is skilled, talented, artistic or creative.

Teachers, like Linus, are too concerned about losing their SECURITY BLANKET. Many become severely frustrated, hostile and authoritarian. (Sprinthall) After 20 years, it dawned on me that my private students and I have been bullied as well; efficiency was always disallowed. An expensive private school invariably discouraged parents to seek the help of a tutor.

WRITING!

Growing From Seed

1 When can you sow or plant these seeds? _all year round_

2 How deep should you plant the seeds? _Half inch_

3 How far apart should the rows be? _15 cm_

4 The spring onions can be picked or harvested _8 - 12_ weeks after they are planted.

5 These seeds are selected and tested for A _ustralian_ and New Zealand gardens. They are packed in _foil sachet_ to retain their freshness.

6 These seeds should be used before _aug 2016_.

TRIVIAL PURSUIT

Unscramble these words from the front of the seed packet.

N	O	O	I	E	H	T	W	I
o	n	i	o	n	w	h	i	t	e

G	P	S	R	N	I	E	E	S	S	D
S	p	r	i	n	g	s	e	e	d	

Unscramble these words from the back of the seed packet.

D	L	S	A	A	S	S	L	I	O
S	a	l	a	d	s	o	i	l	s

Y	N	S	N	U	A	A	P	T	R
s	u	n	n	y	a	p	a	r	t

E	C	I	R	P	E	C	D	O	E
p	r	i	c	e	c	o	d	e

CONSUMER INDOCTRINATION!

What's in a Seed Packet?

One should actually interpret this atrocious writing as a protest in disguise!

SPRING ONION
White Lisbon
5253

"The ideal salad onion. Quick growing with a mild flavour."
Spring Onions grow in most soils, but do best on well dug and manured ground. They prefer an open sunny position.

GROWING FROM SEED

Sow: All year round. 15mm (half inch) deep, in rows 15cm (6in) apart. No thinning is necessary, but keep plants well watered, particularly in dry weather. Make successive sowings every 4-6 weeks.

Harvest: 8-12 weeks from planting when young and tender.

Growing suggestion: Spring onions have long been used to add spice to salads. For something different, but still having the same 'spicy' effect, why not try adding Celery, Kohl Rabi and Capsicums.

Mr. Fothergill's
the very best for your garden

Selected and tested for Australian and New Zealand gardens.
These seeds are packed in a foil sachet to retain their Harvest Fresh vitality.

Sow before AUG 2016
Code Z1
PRICE CODE B

Packed Mr Fothergill's Seeds Pty Ltd.
22 Prime Drive, Seven Hills,
NSW 2147, Australia.

Guarantee '—' If you are not completely satisfied with these seeds we will gladly replace them in U.K.

CONTAINS 680 SEEDS

FOIL PACKED

1 What type of plant can be grown from these seeds? _Spring onion_

2 How many seeds do you get out of the packet? _680_

3 What is the name of the seed company who packaged these seeds? _Mr fothergills_

4 These onions are "The ideal s _alad_ onion" with a m _ild_ f _lavour_".

5 Spring onions grow on m _ost_ s _oils_ but do best on well d _____ and m _____ ground.

6 They prefer an o _____ s _____ position.

20 badges
4 classes share them.
How many for each class?

20 shared among 4

1. $3\overline{)9.6}$ 2. $4\overline{)9.28}$

3. $5\overline{)6.05}$ 4. $6\overline{)0.72}$

In real life never presented as such.

number for each	1	2	3	4	⑤

number sharing $4\overline{)}$

$4\overline{)\,20}^{\,5}$
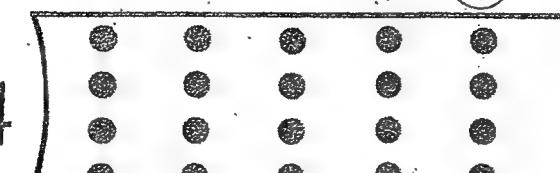

| number needed | 4 | 8 | 12 | 16 | ⑳ |

20 shared among 4 is 5 each.

$20 \div 4 = 5$
WHY CHANGE THE ORDER?

$963 \div 3 = 321$

TRADING

We ask the question 'If we share these blocks among 9 people, will each get some hundreds?'. The answer is no and the hundreds blocks are traded for tens, giving <u>76 tens and 5 ones</u>:
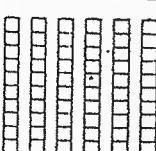

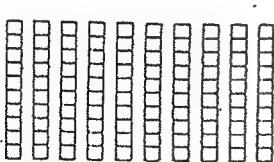

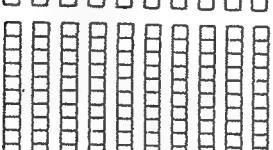

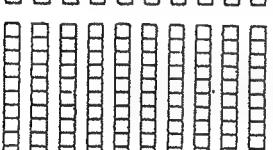

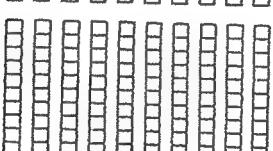

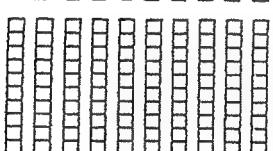

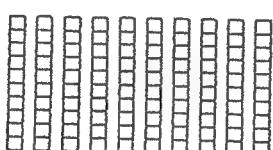

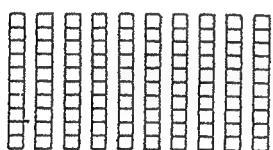

SICK!

MENTAL CHILD ABUSE.

Now, ask the question 'If we share these blocks among 9 people, will each get some tens?' The answer is yes. Each person will get 8 tens. This will use up 72 of the tens and leave 4 tens over.

TRADING

ARMAGEDDON

MAY DAY
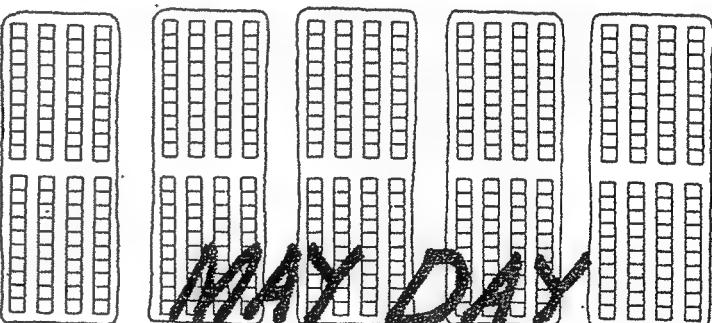

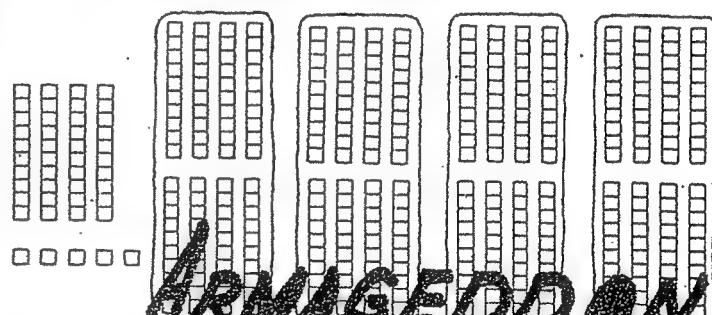

These 4 tens are traded to give 40 ones. Together with the 5 ones already in the pile, this gives a total of 45 ones.

Now, ask the question 'If we share these blocks among 9 people, will each get some ones?'. The answer is yes. Each person will get 5 ones.

SIS!

COMPULSORY PENANCE

the value of the ones digit of the subtrahend is greater than the value of the ones digit of the minuend.

BLAA
BLAA

$$\begin{array}{r} 72 \\ -28 \\ \hline 44 \end{array}$$

The equal-additions method with the subtractive thought is recommended.

Ten ones are added to the ones of the minuend and one ten to the tens of the subtrahend.

CRAZY

In oral work, 'add ten, add ten' is to be preferred. 'Borrow' and 'pay back' are incorrect terms. *BUT STILL USED!*

INSANE!

New Maths for an obsolete activity!

$998 \div 6 = 166 \cancel{r\,2}$ *166 ⅓!*

No! Supporting incompetence.

Fifty times the divisor may be seen as half of one hundred times the divisor.
Multiples preferred by a child are subtracted.

THAT'S WHY HE WILL BE UNEMPLOYED

Changing Fractions to Decimals

Change these fractions to decimals, make sure there are no 'end zeros'

Examples

$\frac{1}{10} = 0.1$ $\frac{1}{100} = 0.01$ $\frac{1}{1\,000} = 0.001$

$\frac{10}{10} = 1$ $\frac{10}{100} = 0.1$ $\frac{10}{1\,000} = 0.01$

$\frac{41}{10} = 4.1$ $\frac{352}{100} = 3.52$ $\frac{100}{1\,000} = 0.1$

1. $\frac{7}{10} = 0.7$ | 2. $\frac{8}{100} = 0.08$

3. $\frac{5}{1\,000} = 0.005$

4. $\frac{16}{10} = 1.6$ | 5. $\frac{37}{100} = 0.37$

6. $\frac{87}{100} = 0.87$ | 7. $\frac{63}{10} = 6.3$

8. $\frac{430}{1\,000} = 0.43$

9. $\frac{906}{1\,000} = 0.906$

10. $\frac{408}{100} = 4.08$ | 11. $\frac{110}{100} = 1.10$

12. $\frac{4\,076}{1\,000} = 4.076$

13. $\frac{80}{10}$

14. $\frac{15}{10}$

15. $\frac{45}{10}$

17. $\frac{550}{100}$

Now change to fra...

19. $0.$

21. 2.1

Use division to change these fractions to decimals

Example

$\frac{3}{4} = 3 \div 4$ $4\overline{)3.00}$ (0.75, 32)

23. $\frac{1}{2} = 1 \div 2$ $2\overline{)1.0}$ (0.5)

24. $\frac{1}{4} = 1 \div 4$ $4\overline{)1.00}$ (0.25)

25. $\frac{2}{5} = 2 \div 5$ $5\overline{)2.0}$ (0.4)

26. $\frac{3}{8} = 3 \div 8$ $8\overline{)3.000}$ (0.375)

27. $\frac{4}{5} =$

28. $\frac{7}{8} =$

29. $\frac{3}{}$

Convert these fractions, which will be recurring decimals

Example

$\frac{1}{6} = 1 \div 6$ $6\overline{)1.0000}$ (0.1666, 444)

$= 0.1\dot{6}$

32. $\frac{2}{3} =$ $=$

33. $\frac{1}{9} =$ $=$

34. $\frac{5}{6} =$ $=$

35. $\frac{7}{9} =$ $=$

Handwritten notes across the bottom:

IGNORANT LEARNED LESS: The Trap!

Compulsory Indoctrination.

8 by calculator: $8 \div 15 = .53\dot{}$

As an Algorism, it should be left IN THAT ORDER!

$8.000 \div 15 = 0.53$
-75
50
-45
5 ETC.

Primary Schools students would do $8\overline{)15}$;
they've always SEEN the smaller number in front!!
"8 INTO 15" $\neq$ $8 \div 15$

UNIT 2: Changing fractions to decimals

Question 1 Write the following as decimals.

a $\dfrac{9}{10} =$ b $\dfrac{5}{10} =$ c $\dfrac{3}{10} =$ d $\dfrac{4}{10} =$

e $\dfrac{5}{100} =$ f $\dfrac{2}{100} =$ g $\dfrac{19}{100} =$ h $\dfrac{21}{100} =$

i $\dfrac{531}{1000} =$ j $\dfrac{625}{1000} =$ k $\dfrac{891}{1000} =$ l $\dfrac{526}{1000} =$

Question 2 Change to a decimal.

a $3+\dfrac{7}{10} =$ b $6\dfrac{3}{100} =$ c $15+\dfrac{5}{100} =$ d $8\dfrac{2}{100} =$

e $81+\dfrac{3}{10} =$ f $65+\dfrac{5}{100} =$ g $32\dfrac{4}{10} =$ h $65\dfrac{1}{10} =$

i $53\dfrac{9}{10} =$ j $4\dfrac{7}{10} =$ k $5\dfrac{6}{100} =$ l $7\dfrac{8}{10} =$

Question 3 Change each fraction to a decimal.

a $\dfrac{1}{10} =$ b $\dfrac{1}{4} =$ c $\dfrac{1}{5} =$ d $\dfrac{1}{2} =$

e $\dfrac{3}{100} =$ f $\dfrac{2}{5} =$ g $\dfrac{4}{5} =$ h $\dfrac{3}{5} =$

i $\dfrac{3}{4} =$ j $\dfrac{1}{8} =$ k $\dfrac{3}{8} =$ l $\dfrac{5}{8} =$

What do they do in class?

Question 4 Express as a decimal.

a $\dfrac{5}{5} =$ b $\dfrac{7}{5} =$ c $\dfrac{9}{5} =$ d $\dfrac{130}{100} =$

e $\dfrac{25}{20} =$ f $\dfrac{32}{50} =$ g $\dfrac{107}{100} =$ h $\dfrac{18}{50} =$

48

UNIT 3: Changing decimals to fractions

Question 1 Write the following as fractions in simplest form.

a $0.3 =$ b $0.7 =$ c $0.9 =$ d $0.13 =$

e $0.37 =$ f $0.023 =$ g $0.157 =$ h $0.09 =$

i $0.4 =$ j $0.25 =$ k $0.8 =$ l $0.5 =$

m $0.1 =$ n $0.2 =$ o $0.6 =$ p $0.7 =$

q $0.03 =$ r $0.02 =$ s $0.09 =$ t $0.008 =$

Question 2 Change the following decimals to mixed numbers in simplest form.

a $1.1 =$ b $2.7 =$ c $4.3 =$ d $7.9 =$

e $3.2 =$ f $4.8 =$ g $5.12 =$ h $6.48 =$

i $3.02 =$ j $5.01 =$ k $8.005 =$ l $9.6 =$

m $12.36 =$ n $18.54 =$ o $50.65 =$ p $83.2 =$

That would take more than 1 hour!

Question 3 Change each decimal to a fraction (mixed number) in simplest form.

a $2.17 =$ b $8.75 =$ c $0.28 =$ d $7.5 =$

e $0.75 =$ f $0.64 =$ g $8.9 =$ h $0.125 =$

i $6.55 =$ j $0.321 =$ k $0.83 =$ l $0.912 =$

m $0.025 =$ n $0.035 =$ o $0.045 =$ p $0.055 =$

Question 4 Express as a fraction in simplest form.

a $0.29 =$ b $0.265 =$ c $0.007 =$ d $0.0075 =$

e $0.05 =$ f $0.0005 =$ g $0.075 =$ h $0.809 =$

i $1.2 =$ j $3.6 =$ k $4.8 =$ l $6.12 =$

m $5.01 =$ n $3.02 =$ o $6.001 =$ p $8.25 =$

Homework

Homework sheets are like correspondence courses; only mature-age students will be able to read, understand and apply the instructions. These is no excellence, equity or a fair go for all if the system deliberately relies on understanding instead of on practical efficiency.

Children need an energetic medium who brings them in touch with their motivation (Steiner).

It is not the task of a working mother come cook, housekeeper and taxi driver!

Poetic Partnership Propaganda only Perpetuates the Proliferation of a semi-illiterate and innumerate Population!

Freefall Mathematics: Altitude Book 1

- Students are now treated like robots. These 'pre-paid' answer sheets are the reason why some children can't write a fraction by themselves any longer! Unfortunately, both Turnbull and Piccoli are like Nero; instead of Rome, the schools are on fire! These do-it-yourself atrocities are the precursor of H.S.C. exams - similar to citizenship application – being checked by a computer.
- Teachers have become like trawler operators judging the quality of the catch in order to write a lengthy paediatrician-type report.
- New Maths has now been upgraded to Newer Maths. Freefall Maths means pushing the parachuteless, compulsory students(now victims) out of an aeroplane to assess how much damage has been done in order to compare it with overseas figures.

39. $\dfrac{9}{4} \times \dfrac{6}{5} = \longrightarrow = 2\dfrac{7}{10}$

Graphic designer
Trudi Canavan

Position: Designer and Illustrator

Company: The Telltale Art

Qualifications/Experience: Advanced Certificate in Promotional Display, Lonely Planet, Oxford University Press; now self-employed as illustrator and designer trading as The Telltale Art: art editor, fantasy author, designer and website designer, Aurealis magazine

Related occupations: book designer, cartographer, fabric designer, artist, web designer

I do a wide range of design and art related work, including illustration (generated by hand and on the computer), map drawing, graphic design, website design, and exhibition design.

If you had told me in my teens that I would be doing what I'm doing now, I would have been very surprised. I was always creative; I was always a career choice; my best marks were in science/maths and art.

I always wanted to be an illustrator, but my school's career adviser told me it would be too hard. My first job, at Lonely Planet, required some illustration work, which renewed my dream. Six years later I had the experience and savings to start as a freelancer.

I use maths to calculate how much paint it takes to cover an exhibition stand, scale plans to life size, and write quotes that take into account depreciation, GST, labour and profit margins. Having an understanding of maths has always helped.

In graphic design, setting up a page grid requires some maths. For large projects I set up spreadsheets to help me work out fees. I use geometry and algebra in exhibition design. The

New South Wales

PARENTS Wake up while Turnbull & Piccoli are still asleep
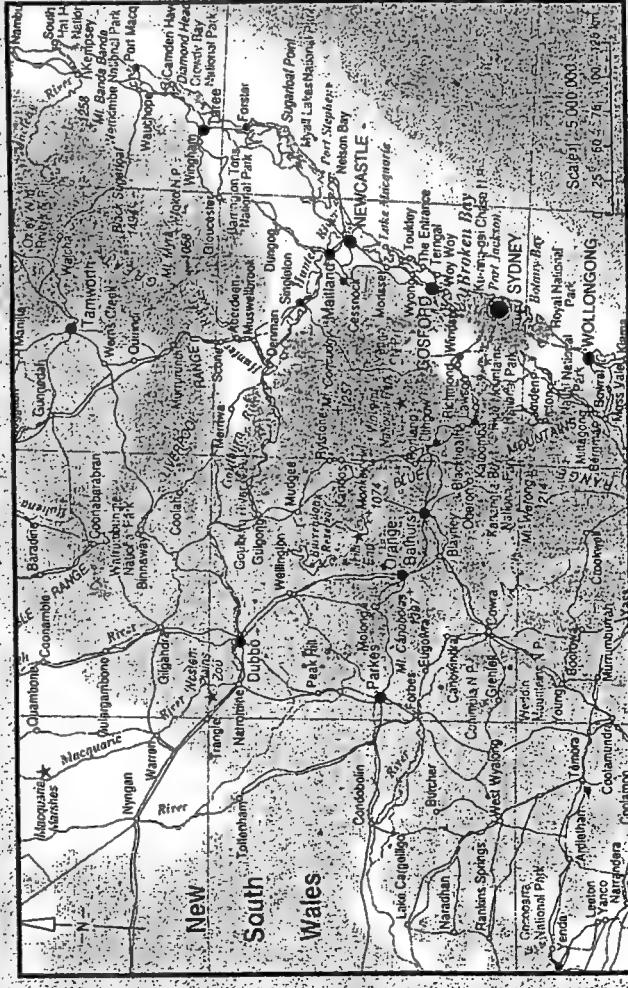

most maths-intensive work I do is cartography. This can involve converting miles to km and working out the scale of a map. I use existing maps as a reference, resize them and make the other changes I want, and then work out my scale bar.

1. I pick two points on both maps. The points should be a reasonably large distance apart. For these two maps, I picked Wollongong and Tamworth.

2. I measure the distance between these two points on the original map. The distance between Wollongong and Tamworth is 74 mm.

3. I measure the distance between the same two points on my map. The distance on my map is 46 mm. I write this as a ratio of my map to the original map — 46:74.

4. Next I work out the size of my scale bar. The size depends on the size of my map. It can't be too small or else it won't very useful. It can't be too big or it will look silly. For the map here I decided on a 100 km scale bar.

5. I then find out how long 100 km is on the original map. 100 km = 100 000 000 mm. As this map has a scale of 1 : 5 000 000, 100 km is represented by 100 000 000 mm ÷ 5 000 000 = 20 mm. If I let the length of the scale bar on my map be s, I can write another ratio that expresses distance on my map to distance on the original map: s:20

6. I now have two equivalent ratios that I can solve to find s, the length my scale bar should be:

$$s : 20 = 46 : 74$$
$$\frac{s}{20} = \frac{46}{74}$$
$$s = \frac{46}{74} \times 20$$
$$s = 12.5 \text{ (rounded to the nearest 0.5 mm)}$$

This means my 100 km scale bar should be 12.5 mm long.

7. Then I draw my 12.5 mm scale bar, marking in the 100 km at the end.

The graphic designer's problem

Trudi needs to work out the scale bar for the map at right. It's based on the detailed map on page 200. She wants the bar to show 100 km of real distance, and she uses Parkes and Sydney as the two points on which she bases her calculations:

(a) How long is the scale bar going to be?

(b) Draw the scale bar for Trudi.

2 (a) Repeat this procedure for two other points on both maps.

(b) What do you notice? Try to explain what has happened.

This is to show how important Maths is — using playground vernacular

110.

$$\frac{4}{5} - \frac{1}{3} = \frac{7}{15}$$

12. My academic and professional background as well as my age allow me to speculate that I am one of the very few, semi-petrified relics of the past who really knows what "Back to Basics" means. My forthcoming, hocuspocus-free book for Primary Schools will prove it.

13. Most senior students are absolutely hopeless when it comes to basic arithmetic. A simple fraction, decimal or percentage is as difficult for them as more advanced Maths.

14. When little priorities demand too much of us, big problems arise. (Maxwell)

15. Too many priorities paralyse us. (Maxwell)

A lion trainer holds a stool by the back and thrusts the legs towards the face of the wild animal. In an attempt to focus on all four, it becomes tame, weak and disabled because its attention is fragmented.

Hair-raising examples of compulsory incompetence
(All necessary working should be shown)

You can't see the wood for the trees
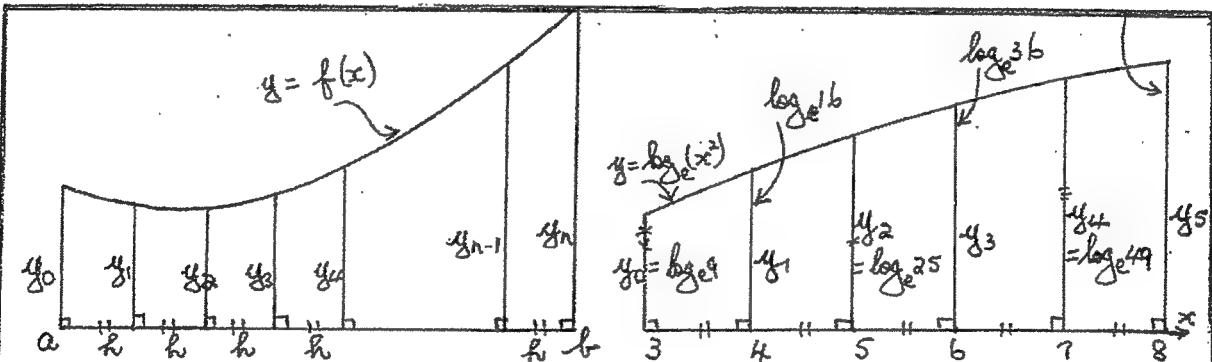

By the Trapezoidal Rule, with n equal sub-intervals, i.e. (n + 1) ordinates, for $y = f(x)$ over the interval $a \leq x \leq b$, then

$$\int_a^b f(x)dx = \frac{h}{2}\{(y_0 + y_n) + 2(y_1 + y_2 + y_3 + \dots + y_{n-1})\}, \text{ where } h = \frac{b-a}{n}$$

For 5 equal sub-intervals, this result becomes

$$\int_a^b f(x)dx = \frac{h}{2}\{(y_0 + y_5) + 2(y_1 + y_2 + y_3 + y_4)\}$$

For $f(x) = \log_e(x^2)$ with 5 equal sub-intervals over the domain $3 \leq x \leq 8$, then $\underline{h = (8 - 3)/5 = 1.}$

Now $y_0 = f(3) = \log_e(3^2) = \log_e 9$; $y_1 = f(4) = \log_e(4^2) = \log_e 16$;

$y_2 = f(5) = \log_e 25$; $y_3 = f(6) = \log_e 36$; $y_4 = f(7) = \log_e 49$; $y_5 = f(8) = \log_e 64$

Thus $\int_3^5 \log_e(x^2)dx = \frac{1}{2}\{(\log_e 9 + \log_e 64) + 2(\log_e 16 + \log_e 25 + \log_e 36 + \log_e 49)\}$

$= \frac{1}{2}(\log_e 9 + \log_e 64) + (\log_e 16 + \log_e 25 + \log_e 36 + \log_e 49)$

$= 16.6$ #, hand calculator, correct to 1 decimal place.

The trees	
The wood	$A = \ln(3 \times 16 \times 25 \times 36 \times 49 \times 8) = 16.6$

Dear Sir,

RE: COMPULSORY INCOMPETENCE
In Maths and English

Early next year, you will receive a copy of my book with the above title. However, in this letter, I want to make you aware of **TWO ISSUES** that need your immediate attention and condemnation. Apart from being the result of the utmost dictatorial stupidity, they not only directly counteract the endeavours of assisting the gifted and even the not-so-gifted, but they are also in total disagreement with the fact that the Board of Studies does not prescribe any particular method.

ISSUE ONE: The compulsory use of crutch figures

The enclosed example is but one of the many **INTOLERABLE** situations whereby my private students' mental ability is hampered as well as questioned by teachers in State – as well as in Private Schools.

In the pre-calculator days, an algorism was a quick and efficient **ROUTINE** to work out answers. An algorism can only be done fluently and successfully when the basic number facts are thoroughly known, which means not by clumsily counting fish, frogs or fingers; players don't practise kicking a ball during a Soccer Grand Final.

Algorisms were never meant to be explained and pulled apart. The present, permanent method for subtraction should have been used as an **INTRODUCTORY DEMONSTRATION ONLY**. Why should a student be requested to show over and over again HOW he did it when the same, simple procedure of "Think one, take on" can and should be done mentally. Why is he considered to be utterly stupid? With that very thought, he will be. Any discussion about self esteem becomes a joke.

If it is compulsory for children to attend school, they should have the right to be taught professionally so that they don't have to be recycled once they leave.

A calculator doesn't show the working; why should students?

To tell them that they should use crutch figures to check where they went wrong is because teachers operate according to a **FAILURE MECHANISM**. Consequently, all students are made to think in terms of what is wrong, so that the teacher can satisfy his subconscious urge to explain as well as his authority.

To tell them to use crutch figures in order to check their sums is either the result of the teacher's own incompetence or of not knowing what he doesn't know. Sums can be checked with the 9-remainder method.

458.

The compulsory use of crutch figures as proof that students didn't copy is blatantly immoral; they should not have to continuously prove their innocence for the benefit of the teacher. Besides, people who can walk don't need crutches.

One teacher went so far as to tell my private student that I tried to confuse him, so he had to do again the ten sums he had successfully completed without turning his page into a wrecking yard.

The above reasons are no doubt only superficial ones. The real reason is, of course, **RESISTANCE TO CHANGE**; it could be called **SABOTAGE**. Enclosed are the various examples of this human trait.

When America wanted to promote soccer, they sensibly invited one of the world's most famous players to give them advice. However, when the Decimal System was introduced and the silly "pay-back" method was abandoned, semi-petrified headmasters and headmistresses came together to turn the change into a complete thunderstorm in a glass of water instead of sending for a European.

IF YOU EXPLAIN TOO MUCH, YOU EXPLAIN NOTHING

The results have been dismal. The new School Certificate Test to be done without the use of a calculator must surely be the result of my observation. Unless the present six Primary books full of puzzles, guessing games, treasure hunts, gimmicks and pictures are thrown onto the garbage tip, matters will not improve. If they are not, it is a clear indication that **THE BIG THEY** don't want students to do well: more and bigger books means more money earned.

Mudslinging without providing a cure would only be distasteful and a waste of time. I therefore enclose a copy of my **FOUNDATION NUMERACY**, k-12 and one of my **2 Unit Maths Dictionary** with more details in both front and back.

It demonstrates that **BACK** to **BASICS** doesn't mean that arithmetic should be done as it was done a hundred years ago. The first book is based on Universal Principles rather than on a limited number of details. The new craze seems to be the use of patterns, despite the fact that Sequences and Series is a 2 Unit topic. To use them as guessing games or I.Q. tests in earlier years is fruitless and has no practical value.

The Bark-patterns on the other hand are extremely practical because they enable students to learn all multiplication facts in one week or less. Writing out an infinite number of tables is now an obsolete activity. Unfortunately, resistance to change will make its introduction doubtful, **unless you yourself make the decision**. These patterns are not the result of a personal invention; they represent a scientific discovery, not unlike the theorem of Pythagoras. The latter is used because Pythagoras died a long time ago; there is no rivalry.

Again, students have the right to take advantage of this new knowledge.

Thank you, for your attention to this matter.

459.

THE 3Rs
THE PRofessional way
A. Bark Cattai N.S.W. 2756

MINISTER FOR EDUCATION AND TRAINING

MINISTER ASSISTING THE PREMIER
ON YOUTH AFFAIRS

Level 2, 35 Bridge Street, Sydney NSW 2000
GPO Box 33, Sydney 2001

1 5 FEB 1999
RML 98/7388

Mr A Bark
30 Reedy Road
CATTAI NSW 2756

Dear Mr Bark

I refer to your letter concerning the mathematics education of students in New South
Wales.

As you have acknowledged, the Board of Studies does not prescribe particular teaching
methods for its curricula. Teachers use their professional judgement to select appropriate
approaches for different situations involving individual students or groups of students.

THE REST IS BULLSHIT *THEY ONLY KNOW THEIR UNPROFESSIONAL WAY!*

Debate amongst educational practitioners on teaching approaches and methods is
common practice and desirable. It contributes to the development of new teaching
approaches and curriculum support materials.

NOT IN A DICTATORIAL SYSTEM!

The Higher School Certificate is currently undergoing major reform following the release
of the New South Wales Government's White Paper *Securing Their Future*. New courses
are being added, while existing courses are being completely rewritten, modified, or
removed.

ANY APPROACH OR METHOD IS BASED ON THE IDEA THAT STUDENTS HAVE ALREADY PROBLEMS

Other significant developments in the Mathematics learning area have included the
implementation of three new courses for Years 9 and 10 at the beginning of 1997, and the
release of *Mathematics K-6 Outcomes and Indicators* in 1998. Such developments have
been undertaken by the Board of Studies following extensive consultation and review of
the latest available research.

BEFORE THEY START.

A further recent development in the Mathematics learning area following the release of
Securing Their Future has been the revised assessment procedures for the award of the
School Certificate from 1998. The School Certificate Mathematics Test contains one
section where the use of calculators is not permitted. This section is worth one-quarter of
the total marks and is designed to test students' number sense as well as their estimation
and mental computation skills. In all other parts of the Test students may use calculators

TRIAL & ERROR

AND NOW - 17 YEARS LATER, JULY 2016 -

*IT WAS ANNOUNCED THAT THE PSEUDO INTELLECTUAL
GARBAGE DOES NOT WORK!! AND THEY ARE 465.
STILL NOT LISTENING TO ME; MILLIONS HAVE CROAKED !!
IN THE PROCESS. GOING BACK TO BASICS? THEY WOULDN'T KNOW HOW !!*

(including many types of graphics calculator), some of which do allow them to review calculations entered and to inspect and follow solutions step-by-step on the viewing screen.

The Board of Studies does direct students undertaking Higher School Certificate Mathematics examinations to show all necessary working in those sections of the papers where this is appropriate. Students are expected to provide sufficient working to demonstrate how a solution was obtained. This is not required for students to receive all the marks allocated to the question as 'bald' correct answers generally receive full marks. It allows students to receive part marks, if applicable and warranted, in situations where they have obtained an incorrect answer. The incorrect answer may be due to a simple arithmetic error in the last stage of obtaining the solution. With all necessary working shown, the student may demonstrate a full understanding of the mathematical processes required and receive all but one of the marks allocated or even full marks. Bald, incorrect answers must, however, receive zero marks.

Thank you for enclosing a copy of each of your books, *Foundation Numeracy K-12* and *2 Unit Maths Dictionary*, which I will pass on to the relevant officers in the Mathematics learning area at the Board of Studies for their information.

Yours sincerely

Stewart Crawford

John Aquilina, MP
Minister

As I said before, "New ideas are lured into a cul-the de-sac and then quietly strangled.

"I have noticed that, with few exceptions, men bungle their affairs. Everywhere I see incompetence rampant, incompetence triumphant". (Raymond Hull; The Peter Principle).
Letters addressed to the Minister don't reach him at all; the Godfather is protected by an army of bodyguards wearing bullet-proof vests with rococheting properties.
Only John Laws can come a bit closer. The situation reminds me of "The Emperor's New Clothes".
The Emperor knew his Ministers were smart men, and they had said they'd seen the cloth.
The Emperor was too proud and vain to admit there was no cloth.
The foolish Emperor went on procession through the streets, and the crowd cheered. They too were afraid to disagree ....as they witnessed the Emperor in no Royal clothes at all.
I am like the little boy that said to his mother,

"Why is the Emperor walking down the street in his underclothes?"
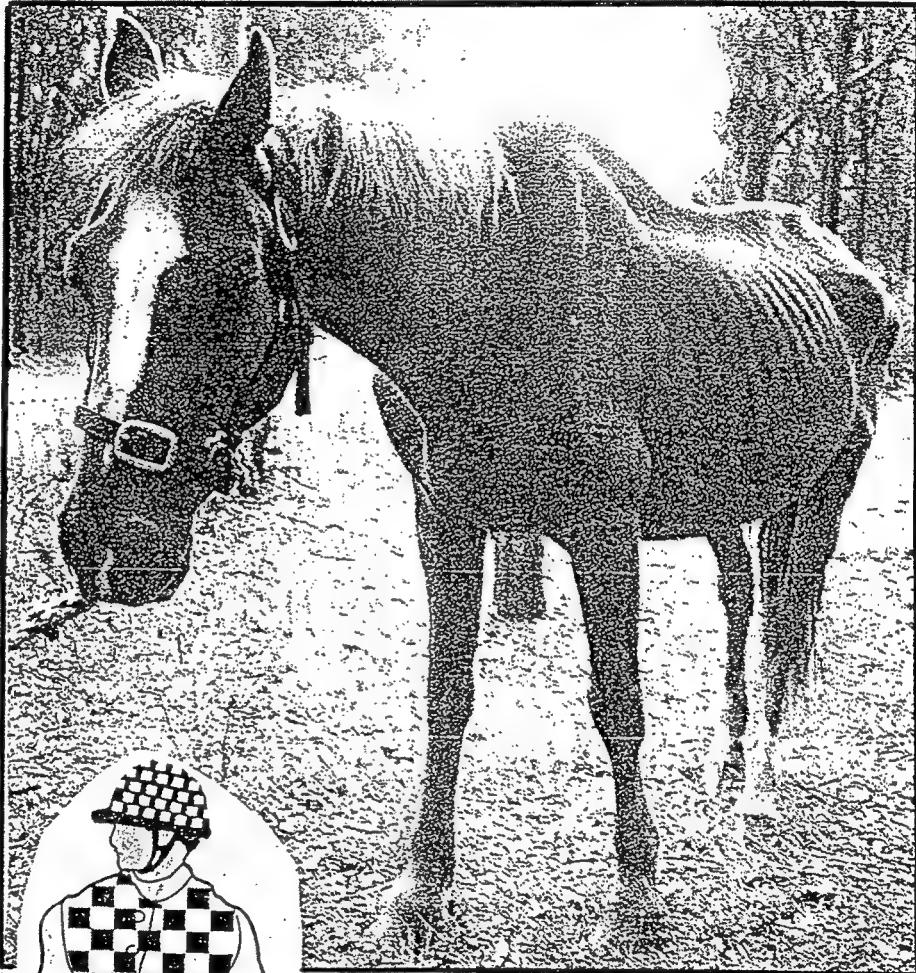

Many would have been better off in the mines or McDonald's than in schools.
There is absolutely no need to spend millions of dollars on setting monotonous exams, ARBITRARILY
marking them in order to artificially find out who is capable of going to University, and, finally, by
ending the concocted results to the victors and the down-trodden. Moreover, these mysterious marks
neither indicate the students' potential nor the teacher's ability.

There is absolutely no need for the H.S.C. exams; schools themselves can do the culling without any
expense.
If Universities introduce an entrance exam, the H.S.C. ones would become obsolete.

School away from school where drop-outs can drop in . .

The Shed: life in the underclass

State schools slump

IN THE third part of our investigation of the NSW school system, education columnist MARALYN PARKER examines what's wrong with the School Certificate and HSC exams

AS more children stay in school to Year 12, parents and teachers are increasingly concerned that the HSC and School Certificate have not adapted to their changing needs.

The two exams cater adequately only for the one-third of students who go on to university but neglect the rest, says Ray Cavanagh, vice-president of the NSW Teachers Federation.

"The HSC fails two-thirds of students who stay on at school," he says.

"It satisfies the needs of the universities because it identifies potential university candidates."

Last year, 60,993 students sat for the HSC. This year, the NSW Board of Studies expects more than 62,600 candidates. Only one-third of them will be offered places at university.

As recently as five years ago, less than half of all students stayed on to Year 12. Most of them went on to university.

Today, about 70 per cent of students stay on to Year 12. Nearly 95 per cent will apply for places through the Universities Admission Centre and receive a TER — Tertiary Entrance Rank.

Bev Baker, the publicity officer for the NSW Parents and Citizens Federation, believes the HSC fails most who do not go on to university because it does not tell employers what the students can do.

"The TER most affects the students who need it least," she said.

"The students who go on to university use it once — to get a place — but the rest have it hanging around their neck for the rest of their lives."
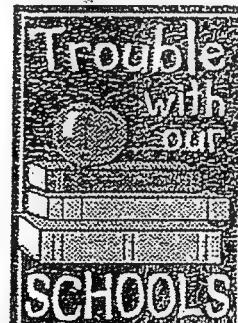

Concern rises on gradings

Today the *Herald* begins a five-part series which highlights what welfare agencies have feared: an "underclass" has arrived in Australia.

The number of children growing up in families where no-one works has now reached 18 per cent.

Unemployment is now reaching into the second and even third generation of families, with many resigned to drawing welfare cheques for the rest of their lives.

Delight, dismay and don't care on post office steps

169.

Protecting our major investment

GOOD WINE NEEDS NO BUSH

When performance is dismally low, PROPAGANDA flourishes.
The ecstatic author of this article, obviously in a state of prophetic inspiration and poetic rapture, desperately tries to get our minds of the raw reality. Education Week statements have the same flavour as New Year's intentions.

This kind of overpowering emotion is usually characterised by loss of self-control and sometimes a temporary loss of consciousness associated with educational mysticism. Unfortunately, it never is "CARPE DIEM", but always "MAÑANA."

Our children, the bright blossoms which flower into the future, are our most delicate, and most profoundly important natural asset. *!!!* *SQUANDERED !*

Delicate by virtue of their inexperience and vulnerability to life's shocks; profoundly important because they inherit our hopes for the future. **To our children, we bequeath the duty of protecting and advancing our way of life so that they might enjoy it.** And handing on that bequest conveys on us a crucial responsibility - the responsibility for our children's education. The work we do as parents, as teachers, as role models, as guides and mentors to our children, will determine to a large degree the extent of their success and happiness. *Always to same Propaganda*
The theme of this year's Education Week - *Values, standards and fair go for all* - is a thought-provoking encapsulation of our shared duty as educators and examples. It may also be considered as a marker point in the community debate about education. For education should be all about standards, standards of attainment, community standards. Teachers and parents must also accept that genuine education is attained only with the establishment of a set of values by which a person may lead a productive and decent life. And all children are entitled to an equal share in such an education. To offer them anything less is not "a fair go for all". In his Education Week message to children, parents and teachers, Education Minister John Aquilina emphasised the Government's determination to give every child the same opportunity to achieve his or her potential, regardless of their geographical or socio-economic circumstances.

Initiatives such as the appointment of more teachers to assist children with learning difficulties, considered changes to assessment procedures, extensive curriculum reform and a sharper focus on early childhood education will add significantly, Mr Aquilina believes, to standards of public education. Parents should understand the spirit of Mr Aquilina's message. The importance of formal schooling in our children's education cannot be overstated, but parents have an equally important role. Invariably, those who see a decline in education standards are the very people who look for a simple answer, the very people who would blame "the schools" for what they see as unsatisfactory educational outcomes. But maintaining educational standards has never been a matter of handing all responsibility for our youngsters' educational welfare to schools. Children whose parents understand the value of learning and of thought do best in school - and in life. Parents who cherish knowledge show their children the best example. This week - Education Week - is an opportunity for parents to join their children in the adventure of learning, to show them they are willing to help.
It's an opportunity we must not ignore.

THE TYRANNY OF TESTING
Banesh Hoffman

FOREWORD

We should take care not to be terribly surprised at the ease with which self-deception can occur on a national scale.

TELLING INSTEAD OF TEACHING   *USELESS*

After years of faith in the so-called experiments that proved the validity of the look-and-say method of teaching children how to read, it turns out that the tests were bad and the results naturally worthless.

IT IS HIGH TIME TO ASK WHAT THIS WOULD-BE EXPERIMENTING IN EDUCATION AMOUNTS TO. IT HAS LONG BEEN KNOWN IN INDUSTRY THAT A MERE CHANGE IN THE SURROUNDINGS OF PRODUCTION WILL IMPROVE OUTPUT TEMPORARILY.

IT IS LIKELY THAT MERE CHANGE HAS THE SAME EFFECT IN SCHOOL, AND ALL THAT THE EXPERIMENTS PROVE IS THAT CHILDREN RESPOND TO NOVELTY IN THE NORMAL WAY OF INCREASED INTEREST.

The way in which the manufacturers of tests defend their product takes on a new importance, for it shows that in contemporary societies, the trappings of science are readily used, in good faith, to produce disastrously false results.

THESE RESULTS BECOME THE STOCK-IN-TRADE OF VESTED INTERESTS. WHEN DOUBTS ARE UTTERED, MONEY AND PRESTIGE ARE THREATENED, and indeed all society is shaken, at least in its **EASY ASSUMPTIONS.**

Testing in personal work does something very different from what was generally thought.
Testing in schools does the very opposite of what was hoped, In the one case, the method represses individuality; in the other, it misreads performance.

AMONG THE TESTS THAT ARE UNFAIR, CERTAINLY, ARE THOSE WHICH PENALISE THE FINER MIND AND THOSE WHICH, THROUGH THE FORCEFUL PRESENCE OF WRONG ANSWERS, MAY DIVERT THAT MIND FROM THE ACCURATE KNOWLEDGE IT POSSESSED A MOMENT BEFORE.   6% of an amount is $300 The amount is

	a)	$18	b)	$50	c)	$1800	d)	$5000

Every citizen and parent should remember the links in this characteristic chain, which begins with method and **ENDS WITH GADGETRY,** whenever proposals come before **BOARDS OF EDUCATION TO SET UP LARGE AND EXPENSIVE SYSTEMS.**

The acts of learning and teaching are more subtle, delicate, elusive, than any method so far found.
The desire to teach great numbers does raise difficulties correspondingly great.

BUT IT IS NO SOLUTION TO DO SOMETHING NEXT DOOR TO WHAT IS WANTED SIMPLY BECAUSE THAT SOMETHING IS EASIER TO DO.

The further argument that essay examinations cannot be graded uniformly, even by the same reader, only shows again the character of mind itself: it is not an object to be weighed or sampled by volume like a peck of potatoes.
A pupil does not really know what he has learnt until he has organised and explained it to someone else. The mere recognition of what is right in some else's wording is only the beginning of awareness of truth.(which Steiner said a hundred years ago) Jacques Barzun, 1962

TRIVIA FOR HOME WORK

<u>Year 5/6 Research</u>

<u>Topic 1</u> <u>Games and Sport</u>

— <u>Due Friday Week 4</u> 28/2/97

* <u>Define</u> the following sports terms:

   calisthenics   coach   pivot   punt   referee   volley   spare   goal

* <u>Write</u> a report on 2 of the following sports :

   archery bowling cricket decathlon football gymnastics rugby skate boarding

   soccer   surfing   table tennis   tennis swimming

* Pretend you are a sports writer for Inside Sport. Write a story about a sports event that takes place during the year

eg. Test match, football final, or a local event such as Little Athletics.

What else? 5/10

CAN YOU EXPECT

* <u>Write</u> a report on one <u>famous</u> person from this list:

ADORATION

   Michael Jordan   Carl Lewis   Greg Norman Shane Warne

E THE

AGI !   Dawn Fraser   Pete Sampras   Mal Meninga   David Campese

The basics strokes used in tennis are the forehand and the back-hand. A forehand drive is one in which the ball is met on the racket-hand side of the body, whereas the more difficult backhand stroke entails extending the racket hand across the body, which is turned partly away to be in ready position.

THE TRAVESTY OF EDUCATION

Your Book is		Watch for	
Outstanding		Completing all work	✓
Very Good		Setting out	→
Good		Gluing in & trimming sheets	→
Satisfactory	✓	Neatness	→
Needs Improving		Spelling	✓
		Presentation of work	

General Comment — WHO IS TEACHING WHOM?
... you must always try to complete each activity
and stay on the topic. I wanted to know more
about Greg Norman, not the game of golf.

indergarten - Year 12

28.

QUI DOCET DISCIT

The Federation motto ('Who teaches, learns')

This course introduces junior secondary students to the need for "independent study sessions" in addition to their normal homework assignments. It explains the essential elements needed for a successful study programme.

It motivates students to improve the efficiency of their study methods and promotes positive attitudes towards study and tests/exams.

PART 1 - BECOMING A WELL-ORGANISED STUDENT

* Developing listening/note-taking skills in the classroom
* Defining "study"
* Acquiring a positive attitude to study
* Formulating your own study goals
* Dividing study time
* Constructing study timetables

HOPE AND GLORY

PART 2 - THE ELEMENTS OF A SUCCESSFUL STUDY SESSION

* The physical conditions for effective study
* Maintaining interest/coping with boredom
* The importance of regular study routines
* Reviewing the day's schoolwork
* Getting the most from your textbook reading
* Making effective notes from your textbooks

THE GOLDEN EGGS

PART 3 - IMPROVING MEMORY & EXAM TECHNIQUES

* Developing a better memory
* Learning from mistakes
* Final revision before exams
* Overcoming nervousness ⟶ *PANADOL*
* Correctly interpreting exam questions
* A systematic approach to multiple choice tests: *DO YOUR QUESTION*
* Planning essay answers *IGNORE ANSWERS*

THE TYRANNY OF TESTING

All students actively participate in this course. Their workbook then becomes a comprehensive reference document for future use. Class size-maximum 20.

AS ALWAYS: IT'S IN THE BOOK (INTERNET), NOT IN THE HEAD.

Finish

There is a multitude of different definitions which attempt to explain what communication is. One book: "The Functions of Human Communication— A Theoretical Approach", lists over one hundred and twenty-five!

Definitions can be complex: *BACK TO ADAM & EVE*

"Communication is symbolic behaviour that occurs between two or more participating individuals. It has the characteristics of being a process, it is transactional in nature and it is affective. It is a purposive goal-directed behaviour that can have instrumental or consummatory ends."*

or they can appear to be quite simple:

"Human communication has occurred when a human being responds to a symbol."*

LISTING 348. INSTEAD OF SHOWING. DON'T GO TO SCHOOL; USE INTERNET !

Abolish
Tests and Reports

- **Tests are discriminatory!**
  They should only be used-without marking them-to give teachers an indication of his own performance and be used to prepare follow-up lessons.
  In the New Millennium School, students decide what they want to be tested on; marks are replaced by a level of achievement.
  Example for Equations: 5/18 which means that the student was able to solve the first 5 of the graded total of 18.
  At any time, students should be given the opportunity to score better. Reports should be replaced by a record of achievement for the 12-year period.

- **Reports are discriminatory** because they indicate the performance of students without taking into account the teacher's competence which includes their personal relationship. Some private schools use a set of more than a hundred ways of classifying a student which is of course utterly ridiculous.

KINDERGARTEN.

Dear Mr & Mrs   , **OVER THE TOP**
                                    is a very enthusiastic student
who has continued to display a happy & confident manner
in all areas of kindergarten life. She is always cooperative
& courteous. She has been an absolute joy to guide during
1994.

In <u>Religion</u>   always responds naturally to prayer &
school liturgies. She understands that God loves her; that she
is special & can do many things & that God's world is beautiful.
She has a very caring nature.

In <u>Mathematics</u>   is beginning to understand surface
area & she can discuss symmetry; she can discuss, compare
& understand pictorial graphs; she can use & understand the
terms "day-time & night-time" & sequence events within
one day. She confuses "today & tomorrow" & she needs
revision in stating the days of the week. She can count
confidently by 1's to 29. She needs to count more at home.
She needs to revise counting backwards from 10 & by 10's
to 100. She now knows all the numerals from 1-9 but
she is very hesitant with 10 onwards. She can use the
dice to write & solve her own number stories but she
cannot always fully describe with understanding what she
is doing. She is now exploring the meaning of subtraction
through the use of concrete materials. She has made slow progress.

In <u>English</u>   can recognise & hear all the sounds.
She is beginning to blend sounds to form simple words;
eg: "cat; hut; web." Her diary stories have progressed
& sometimes have true meaning. She can use a
sentence maker to construct her own stories & she can
read these. She is not as yet, demonstrating that she
understands the meaning of print; she is still at a pre-
reading level. I would like this to be monitored in 1995
as she may need extra assistance with reading.!!

35

During Semester 2 it has been noted that . . -- . has displayed the ability to:-

* understand that the Church's mission began at Pentecost
* understand that Baptism, Eucharist and Confirmation are Sacraments of initiation
* understand that in Sacraments of initiation one commits themselves to Jesus
* understand that they can choose to serve others
* understand that there are different lifestyles to be found within the Christian Vocation
* interpret newspaper reports more perceptively
* report events creatively
* write headlines
* express opinions
* proofread a piece of writing
* draw cartoons and illustrations
* ask questions
* make comparisons
* write a recount
* write a news article from a narrative
* begin to organise problems solving in a more systematic manner
* to begin to take risks when solving problems
* improve in confidence when solving problems
* work independently
* contribute to class discussion
* locate main idea using notes
* strengthen information intake skills
* begin to work independently
* usually contribute to class discussions

SICK!

* explain the features of different landforms
* make a model of a particular landform
* initiate and preserve with activities to their completion ie.design and make task
* think and acts creatively
* become less cautious about her artwork
* show originality
* develop good design skills
* have good sense of colour, balance, texture, tone
* participate in oral class reading of Italian texts

Areas for <u>further development</u> include:

→ *after all this*

   you have made sound progress this year due to your hard work and determination. You have attempted all tasks and have asked for help when you needed. You have improved your writing skills, in the areas of spelling, grammar and organisation of thoughts in logical sequence. I would encourage you to continue to work consistently on your reading and writing in order to continue the progress you have achieved so far. In Mathematics you have understood most of the concepts presented . and next year as these are revised and developed you will understand them even better if you continue to seek help and do your best.

36

Fifty years ago, in Holland, only marks from one to ten were given so that parents knew exactly how their children were coping.

At present, as a result of disastrous methods, non-teaching and dismal results, parents are mesmerised by an increasing amount of deceiving bullshit in order to stave off a highly needed revolt.

MORE ADMINISTRATION THAN

Key	Title	Comment
8102	MATHEMATICS	I am impressed with @N@'s improved commitment to Mathematics . Unfortunately, @T@ has contiued to struggle at this level
8103	MATHEMATICS	@U@ must ask more questions when having difficulties graspin g concepts, and spend more time on exam preparation.
8104	MATHEMATICS	has allowed @O@ results to slide a little this term. @U@ cer tainly has much more potential than this result indicates
8105	MATHEMATICS	is a capable mathematician, at this level, and needs to set high goals for himself
8106	MATHEMATICS	These results reflect a sound understanding of the mathemati cal concepts presented
8107	MATHEMATICS	is a capable mathematician at this level and should set high goals for himself
8108	MATHEMATICS	@N@ has done well on all fronts and must be commended for @O @ enthusiasm. @H@ exam answers show
8109	MATHEMATICS	@N@ is a committed mathematician, but @O@ results are a litt le disappointing. His examination exhibited far too many
8110	MATHEMATICS	This reflects a lack of thorough preparation - more applicat ion is required
8111	MATHEMATICS	certainly concentrates in class and applies himself fully to all assigned tasks, yet more time is required with exam
8113	MATHEMATICS	@N@ should be a little disappointed with this result. @U@ is a far better mathematician than this result suggests
8114	MATHEMATICS	@N@ needs to spend more time reading the question to ascerta in the method required to solve it. I am sure @T@ will
8115	MATHEMATICS	@N@ has been a co-operative member of the class and has work ed consistently. However, under exam conditions
8116	MATHEMATICS	needs to put further effort into specific preparation for ex ams
8117	MATHEMATICS	has worked efficiently and conscientiously throughout the se mester. I am impressed with his overall work ethic
8118	MATHEMATICS	has certainly acquired a thorough understanding of the conce pts presented and laid a solid foundation on which to
8119	MATHEMATICS	exam answers show the odd mechanical error, but @O@ grasp is firm and @O@ understanding is clear
8120	MATHEMATICS	It is pleasing to note that @N@ has decided to work a little harder this term to achieve results which are commensurate
8121	MATHEMATICS	I trust @N@ will continue to make the most of @O@ ability
8122	MATHEMATICS	Unfortunately, @N@ has not applied himself to a regular stud y programme and thus has suffered accordingly
8123	MATHEMATICS	is easily distracted and at times slow to get down to the ta sk at hand. Greater application is required
8124	MATHEMATICS	has done well on all fronts and must be commended for @O@ en thusiasm
8125	MATHEMATICS	comes to class consistently prepared and always asks appropr iate questions and invariably answers the more difficult
8126	MATHEMATICS	is to be congratulated on @O@ efforts this semester
8127	MATHEMATICS	At times, @N@ is a little careless and rushes @O@ work, resu lting in silly mistakes. More care is needed
8128	MATHEMATICS	must devote many hours to regular study routine if @T@ wishe s to achieve the results of which @T@ is capable
8129	MATHEMATICS	must improve @O@ study routine if @T@ is ever going to produ e a result commensurate with his ability
8130	MATHEMATICS	has tried quite hard throughout the semester
8131	MATHEMATICS	However, I feel @N@ does not understand some of the concepts and should be seeking more assistance when clarification is

TEACHING

123 TO CHOOSE FROM !

(SAMPLE ONLY)

SINCE TEACHERS CAN'T EVEN VISUALISE THEIR STUDENTS ANY LONGER, THEY MATCH THIS CRAP WITH PHOTOGRAPHS!

Abolish homework
including assignments

- Schools have no jurisdiction outside the school grounds.

- Being taught is compulsory; telling students to teach themselves is a contradiction.

- Homework has always been a chore with nagging parents; not very conducive to learning.

- Travelling to and from school, domestic chores, sport or some leisure time should be taken into account.

- **All work (including studying) should be done at school.**
  The necessary time could be made available by keeping students longer in school, by shortening the holidays and by **abolishing** time-wasting activities like pupil-free days, work experience or walking the streets one afternoon because that has nothing to do with physical fitness and losing weight!

Stop doing the homework, overzealous parents warned

Homework time ... the Della Marta girls are allowed to study without too much intervention from their mother, Merrion, who says, "I see all this pushing, pushing."
Photo: *Kate Geraghty*

Adele Horin and Anna Patty
September 23, 2006

AS EXAM season looms, parents risk damaging their children and robbing their self-esteem by rewriting their essays or trying to do their study for them, education experts have warned.

Some Sydney schools are sending notes home to warn parents off their children's homework, and at least one high school is requiring students to complete assignments in class time, to ensure they are doing their own work.

Parents who rewrite the history essay, polish the English assignment, and say "We got a good mark for science," are in danger of undermining their children's confidence and causing long-term psychological problems, child psychologists warn.

"Unless the children are geniuses, their work is hardly ever going to be as good as an educated parent's, and so they grow up feeling whatever they produce is never going to hit the mark," said Beverley Thirkell, an educational psychologist on the northern beaches.

In a highly competitive world, the rise of the overinvolved "parachute" parent who rescues their children from difficulties is receiving widespread attention in Australia, Britain and the US.

"The message parents send when they do the work for their kids is, 'You can't do it well enough, I'll do it for you,' " said Elbie Van Coller, a school counsellor on the North Shore. "It's producing some very anxious children."

Psychologists say they are seeing many troubled young people from middle-class homes who feel they can never be "good enough".

In *The Price of Privilege*, a new book just out in the US, the psychologist Madeline Levine claims children from affluent middle-class homes are three times more likely than other children to suffer depression and anxiety in later life.

Parents are increasingly worried about their children's future and exert, however subtly, pressure to excel, she says. The more scared the parents, the more controlling they become. Many end up giving more than a helping hand in homework to ensure their child's mark is high enough. "While demands for outstanding academic or extracurricular performance are very high, expectations about family responsibilities are amazingly low," Dr Levine said. "This kind of imbalance in expectations results in kids who regularly expect others to 'take up the slack', rather than learning how to prioritise tasks or how to manage time."

A spokesman for the NSW Department of Education said some schools reinforced their home study policy with formal advice to parents, discouraging them from doing their children's homework.

MENTAL GENOCIDE

- The following **commercial atrocities** (Spiral Curriculum) show clearly that teachers don't teach any longer, they only give instructions and tell students and parents what to do.

- **Lessons are like puzzles**; they invariably involve wasting time as well as making mistakes either because of ignorance or boredom. However, the stupid, static cartoons can never compete with the dazzling and therefore mesmerising circus on T.V.

- Basic skills tests are like IQ tests because statistics are more important than children apparently.

- When one watches the following pages, all one sees is **chaos**; it has nothing to do with Literacy or Numeracy! The damage done is beyond comprehension.

- **Any person not shocked by this alarming report are hypocrites, ignorant, cowards or idiots who invented the crap!**

PROCESSED GARBAGE.
TO KEEP THE KIDS QUIET.

THE TRAVESTY OF EDUCATION

COMPULSORY DISCOVERY

15 worms on page 24 and 10 went to sleep.
Write the number fact like this.

$$\begin{array}{r} 1\,5 \\ -\,1\,0 \\ \hline 5 \end{array}$$

Say the number. Write how many tens and ones.

Loop tens and ones to match.

thirty-six

_____ tens _____ ones
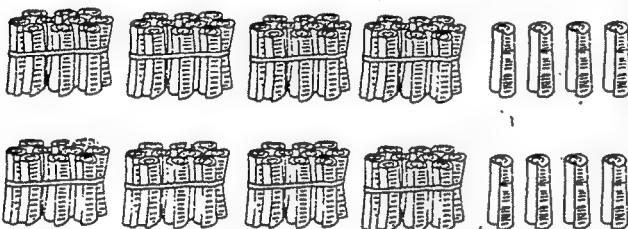

Always speak to the child some years ahead. Do not the men of genius speak to us centuries ahead in books? (Steiner)
The use of a bare-legged and bear-headed matron shows clearly what adults think of a child's intelligence.

Use the storybook to make up your own number stories.
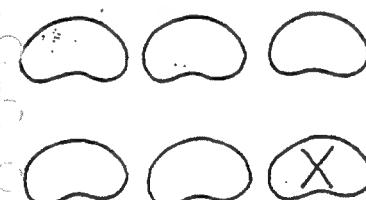

Start with _____   1.

take away _____

⟨ is the same number as ⟩

— _____

7 – 1 ⟨ is equal to ⟩ 6	3. FINALLY 7 – 1 = 6
	SEVEN – ONE'S SIX

2.

If you have to say this the COMPULSORY WAY, it sounds like a schoolbus on four flat tyres going over pedestrian humps

FLUENCY
Actually, there is no need to say anything; eyes and pen do the work.

This retarded method is like the whole-word method for teaching reading: each word is an individual: the outer expression of an inner desire
My students work with the MASTER KEY:
If you take 1 from a number, you get the number before: 15-1, 36-1, 1223-1

58.

1. <u>Wind</u>   Choose one of the following to research
   * <u>Make</u> a wind instrument to show the direction of the wind.
   * <u>What are</u> the "Roaring Forties" ? <u>Where are</u> they and why did explorers use them ?
   * Cyclones - What <u>is</u> a cyclone ?
     <u>How do we know</u> a cyclone is coming ?
     <u>What precautions</u> should we take ?

2. Rain
Draw a map of Australia showing areas of rainfall.
What causes thunder and lightning ?
How can lightning be dangerous ? How can you protect yourself ?
Design an experiment to show static electricity.

3. <u>Clouds</u>
* <u>Find out</u> where clouds come from
(how they are formed)
* <u>Classify</u> the types of clouds and <u>write</u> a brief description and a picture of each. ? ←
* <u>Keep</u> a cloud watch for a week. <u>Relate</u> your cloud cover to the type of weather experienced each day, <u>explain</u> changes in the weather and <u>why</u> it happens.
* <u>Find out</u> why the sky is blue.

<u>Due Date</u> : Monday 8th September, 1997

* All experiments <u>must</u> be bought to school explained and shown to the class.
* Presentation will be marked out of 10.
* Final marks will go towards your end of year result. *THE BIG THREAT!*

Personal

HOW DO WE COMMUNICATE?

Comment _ _ _ _ _, (some) good work, especially on thunder and lightning, (but) you needed more information on how to protect yourself Signed

Thus, for communication to take place, it is necessary to have:

* a sender;
* a message;
* a receiver;

Development
OR STUNTED GROWTH?

* a medium which both sender and receiver understand;

The figure on the right shows the correct way to hold the pencil and ruler. The fingers of the left hand are placed evenly on each side of the centre of the ruler. The pencil is held in the right hand with the point against the edge of the ruler and the top leaning a little towards the right. The pencil is moved from left to right to draw the line.
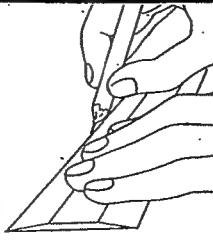

Reading and writing decimals

0·37 is read as either
'37 hundredths', or
'3 tenths and 7 hundredths'.

·37 POINT THREE SEVEN

SENIOR: Rational Numbers

Building frames from rigid strips joined by single pivots.

The child may discover that

a triangular frame is rigid, and
a four-sided frame with no diagonal is not rigid.

The introduction of a diagonal strip into a four-sided frame makes it rigid.

The terms *parallelogram* and *rhombus* may be introduced for the figures obtained when a rectangle and a square are distorted.

When two fractions have the same numerator, the fraction with the smaller denominator names the larger rational number.

A fraction equivalent to a given fraction can be obtained by

multiplying the numerator and denominator by the same counting number, or
dividing the numerator and denominator by a common factor.

A fraction may be used to indicate division of two counting numbers, the dividend becoming the numerator and the divisor the denominator.

---

either divisor or dividend is a whole number;

$$\frac{3}{4} \div 2 = \frac{3}{4} \div \frac{2}{1}$$
$$= \frac{3}{4} \div \frac{8}{4}$$
$$= 3 \div 8$$
$$= \frac{3}{8}$$

BROWN							
W	W	W	W	W	W	W	W
LT. GREEN							

$$2 \div \frac{3}{4} = \frac{2}{1} \div \frac{3}{4}$$
$$= \frac{8}{4} \div \frac{3}{4}$$
$$= 8 \div 3$$
$$= \frac{8}{3}$$

If the white rod is called $\frac{1}{4}$, the brown rod becomes $\frac{8}{4}$ and the light green rod $\frac{3}{4}$.

The two questions then become,

'What part of the brown rod equals the light-green rod?'   and

'What part of the light-green rod equals the brown rod?'

These questions correspond respectively to $3 \div 8$ and $8 \div 3$.

the divisor and dividend are not whole numbers.

$$\frac{1}{2} \div \frac{2}{3} = \frac{3}{6} \div \frac{4}{6}$$

Discovering fractions

What fraction of your fingers is on your left hand?

How many articles of clothing are you wearing? What fraction of these is your shirt?

Equivalent Fractions

Build this mat of rods.
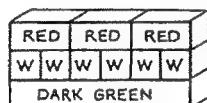

When dark green represents a value of 1, white will represent $\frac{1}{6}$ and red, $\frac{1}{3}$.

Study this diagram.
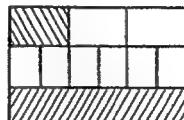

$$\frac{1}{3} = \frac{2}{6} = \frac{3}{9}$$

Fractions—Lowest Terms

That fraction of the set of equivalent fractions which has the smallest possible numerator and denominator is said to be a fraction expressed in its lowest terms.

Study this table:

$$\frac{10}{15} = \frac{2}{3} \qquad \frac{8}{12} = \frac{2}{3} \qquad \frac{6}{9} = \frac{2}{3} \qquad \frac{4}{6} = \frac{2}{3}$$

$$\frac{10 \div 5}{15 \div 5} = \frac{2}{3} \quad \frac{8 \div 4}{12 \div 4} = \frac{2}{3} \quad \frac{6 \div 3}{9 \div 3} = \frac{2}{3} \quad \frac{4 \div 2}{6 \div 2} = \frac{2}{3}$$

What rule does this table suggest to you? ....

Express the following mixed numerals as improper fractions;

For example,

$$2\frac{1}{4} = \frac{2}{1} + \frac{1}{4}$$
$$= \frac{8}{4} + \frac{1}{4}$$
$$= \frac{9}{4}$$

$$2\frac{1}{4} = \frac{9}{4}$$

YR. 8   SHOW WORKING!

$$2\frac{2}{5} = 2\frac{2}{5} = \frac{2 \times 5 + 2}{5} = \frac{10 + 2}{5} = \frac{12}{5}$$

Mixed Numerals

Study this diagram.

Prepare this pattern of rods.

$3\frac{1}{3}$

$$3 + \frac{1}{3} = 3\frac{1}{3}$$
$3\frac{1}{3}$ is called a mixed numeral
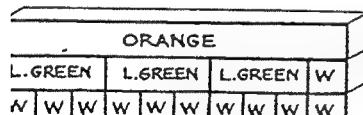

Call Light Green 1

White $= \frac{1}{3}$ Light Green

Orange $= 3\frac{1}{3}$ Light Green

$\qquad = 3$ Light Green $+ \frac{1}{3}$ Light Green

$\qquad = 3 \qquad\qquad + \frac{1}{3}$

$\qquad = 3\frac{1}{3}$

$3\frac{1}{3}$ is called a mixed numeral
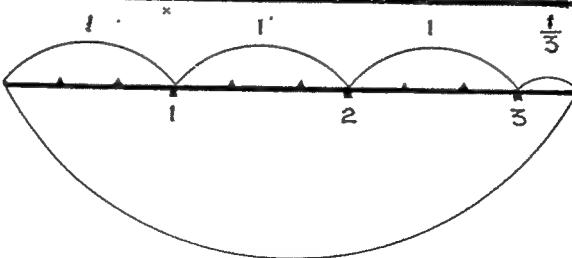

Your rule for equivalent fractions is:
Multiply both numerator and denominator by the same number:

$$\frac{2}{3} = \frac{2 \times 4}{3 \times 4} = \frac{8}{12}, \text{ or}$$

divide both numerator and denominator by a common factor:

$$\frac{9}{12} = \frac{9 \div 3}{12 \div 3} = \frac{3}{4}$$

DECIMALS
LOST HORIZON

Rods
Let 10 mats of 10 orange rods represent

a. What does each mat represent?
....

What does 1 orange rod represent?
....

What does 1 white rod represent?
....

State the patterns of rods that represent the <u>rational</u> numbers expressed by the following:

b. $\frac{3}{1,000}$ ...... $\frac{43}{1,000}$ ...... $\frac{502}{1,000}$

c. 0·003 ...... 0·043 ...... 0·502

d. $1\frac{5}{1,000}$ ...... $3\frac{89}{1,000}$ ...... $3\frac{452}{1,000}$

e. 1·005 ...... 3·089 ...... 3·452

Diagrams
Let a strip of graph paper made up of 10 square inches represent 1.

19. *a.* What value is represented by each square inch? ....

$$0.4 \times 3 = \frac{4}{10} \times \frac{3}{1} = \frac{12}{10} = 1.2$$

$$0.06 \times 4 = \frac{6}{100} \times \frac{4}{1} = \frac{24}{100} = 0.24$$

$$1.2 \times 6 = \frac{12}{10} \times \frac{6}{1} = \frac{72}{10} = 7.2$$

CRAZY
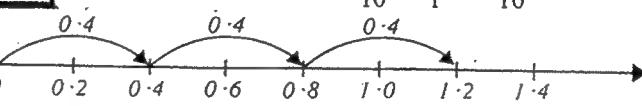

RESISTANCE TO CHANGE

$$0.4 + 0.4 + 0.4 = 1.2$$

NEW MATHS

Division

Long before they begin school, children are involved with sharing. They solve problems such as 'I have 12 jelly babies to share among 4 children. How many jelly babies will each child get?' or 'I have 13 jelly babies to share among 4 children. How many jelly babies each?'

However, sharing is only one of the two aspects of division which your children meet. The other is called grouping.

(Sharing)   *NEW SPEAK !*

Problem: I have 20 jelly babies to share among 4 people. How many will each person get?
Materials:

WHEN Leon starts kindergarten this week, he will already know how to write his name, count to 100 and write numbers up to 20. *BIG DEAL !*

That's more than a lot of parents would have learned in their first year at school. And five-year-old Leon is no progidy — most of his classmates will be able to match him.

The generation gap will continue so that by the end of the year they will have learned more than their parents covered in their first two years of school.

THEN THE RESCUE SQUAD HAS TO COME IN ! AND

rouping

oblem: 20 children are going to a picnic in cars which can 4 children each. How many cars will be needed?

THE SPIRAL CURRICULUM

The worst exercises are those leading up to **EQUATIONS**; that's why students still can't do them in year eleven. (Maths in Society).

add more to make [17]

COUNTING
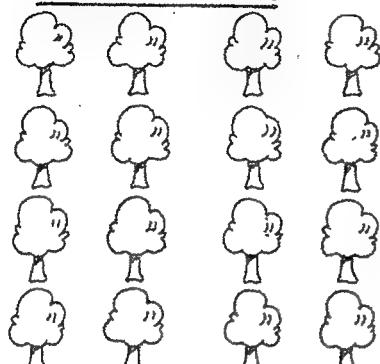

2.

YEAR 6.

Replace the frame, Δ, by an operation sign.

$\frac{126}{9} \Delta \frac{91}{13} = 21$

$7 \times 7 \; \Delta \frac{78}{13} = 294$

$15 \times 3^2 \Delta 3^2 = 15$

GUESSING

In each of the following number sentences replace the frame, $\bigcirc$, by $=$, $>$ or $<$.

$9 \times 42 \bigcirc (9 \times 30) + (9 \times 12)$

$7 + (8 \times 7) + 8 \bigcirc (7 + 8) \times (7 + 8)$

$20 \times 2^2 \bigcirc 10 \times 2^3$

$(35 + 5) \times 6 \bigcirc 5^2 \times 10 - 10$

ALGEBRA ?

Draw a line diagram to represent each of the following number sentences.

$14 + \square = 22$　　　　$4 + 3 + 5 = \square$

$94 - \square = 25$　　　　$6 + 5 - 3 = \square$

$19 \times \square = 76$　　　　$3 \times 3 \times 3 = \square$

$65 \div \square = 5$　　　　$(4 \times 5) \div 2 = \square$

THE DAMAGE

"What do you have to add to 14 to get 22 is not mathematics; its counting fingers. With REAL EQUATIONS like $2x - 9 = 5$ that can't be done any longer, so students are lost once again. Hence the following trivia. Unfortunately, two wrongs do not make a right.

We can find the solution to the equation $a + 5 = 8$ in a more systematic way than just guessing. *BLAA BLAA*

When trying to solve the equation, we are trying to find the value of a which makes the equation true. We need to have a on its own.

Instead of　　$a + 5 =$

we want just　　$a =$

Thus we have to undo '$+5$'. From our investigation of inverse operations we know that subtracting a number undoes addition of that same number, so '-5' is the inverse, or undoes '$+5$'. *BLAA BLAA*

Thus　$a + 5 - 5$　two inverse operations

simplifies to a on its own as we required.

The equation could be represented on balanced scales.
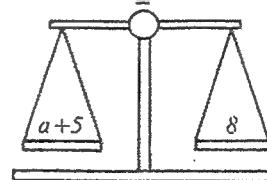

Fig 8.6

Then we undo '$+5$' but the scales are unbalanced.

WEIGHING

The left-hand side: $a + 5$

became $a + 5 - 5$

when we included the inverse of '$+5$' by putting in -5.

Fig 8.7

If we include something extra on one side of the equation it must also be included on the other side to keep the equation balanced: *BLAA*

Original equation:
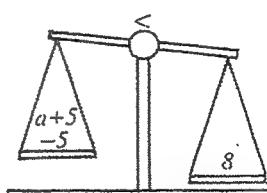

Fig 8.8

-5 included on both sides:

simplifies to　$a + 5 - 5 = 8 - 5$

$a = 3$

which is the solution we have already found to be correct.

YEAR 7.
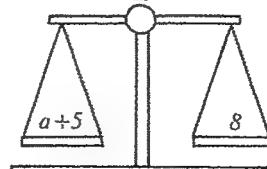

Fig 8.9
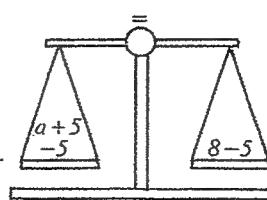

LES MISÉRABLES

Check your workbook weekly. Follow these ten guidelines. Next to each point place a G (Good) , S (Satisfactory) or U (Unsatisfactory). Both you and your parent must sign it.

but not like that!

1. Date each day's work.
2. Use blue/black pen only and rule a margin and underline all headings in red.
3. Include sample problems with steps and reasons.
4. Highlight the major points.
5. Include comments in your own words to make your notes more meaningful.
6. Label and number all exercises clearly and correct all work.
7. All worksheets must be pasted in when they are received and dated.
8. Include a summary statement at the end of each day's notes.
9. Include a written statement of all homework and when it is due.
10. All notebook evaluation sheets must be pasted in your book.

THE TRAVESTY OF EDUCATION

FIFTH APPLICATION OF PARKINSON'S LAW:
QUANTITY INSTEAD OF QUALITY TO KEEP STUDENTS BUSY.

The Manufacture of Need: books are now four times the size they were thirty years ago.

Duplication: Definitions given in the textbook are written on the blackboard to be copied into workbooks.

Students become no more than process workers. **Only the SHORT TERM MEMORY IS INVOLVED.**
New material has to be processed within 30 seconds,
otherwise it will never enter the **LONG TERM MEMORY BANK.**
Obviously, that is the whole idea; it's a perfect way to fill in time.

Scale drawing is a ratio that is in the formof
1:(a number).

A scale drawing of an object is the same but of different size.

YEAR 8

$$Scale = \frac{length\ of\ drawing}{Actual\ size}$$

A1 = 5×4 = 20 cm²
A2 = 5×4 = 20 cm²
A3 = 16×4 = 64 cm²

TOTAL = 104 cm²
→ or 1.04 m²

Question 1

a) State Pythagoras' Theorem

add the squares of the two shorter sides to get the Hypoton8s

b) What is the longest side of a right-angled triangle called?

The longest side is the Hypothesis

(2)

Question 2

Find the value of x

a)
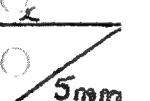

x   8cm   6cm

$64 + 36 = 100$

$x \sqrt{100} = 10\,cm$ (2)

b)

x   5mm

$x = $

c) (leave your answer in surd form)

x   8   3

$64m + 25m = 89m$

$x = \sqrt{89}$ (2)

d) (leave your answer in surd form)
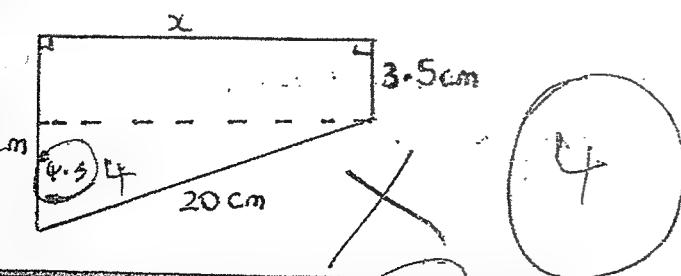

x   3.5cm   20 cm   (4.5) 4

(4) ✗

Question 3

a) A ladder 13m long just reaches the top of a wall. If its foot is 5m from the wall, how high is the wall?

13m   5m
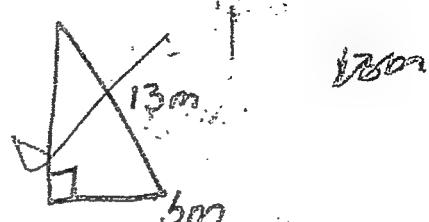

b) What is the length of the longest pencil that can fit into the rectangular prism shown below.

4cm   8cm   12cm

$\sqrt{185}$

$\begin{array}{r} 16 \\ 25 \\ 144 \\ \hline 185 \end{array}$
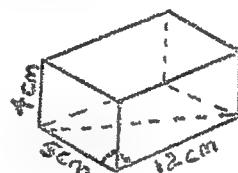

5

c) A pole is steadied by three wires. Each wire is fastened to the pole at a point 12m above the ground and is anchored to the ground 9m from the foot of the pole. How many metres of wire are needed for the three wires?

12m   9m   9

$\begin{array}{r} 144 \\ 81 \\ \hline 225 \end{array}$

3/5

147. $= \sqrt{675}\,m$ 15
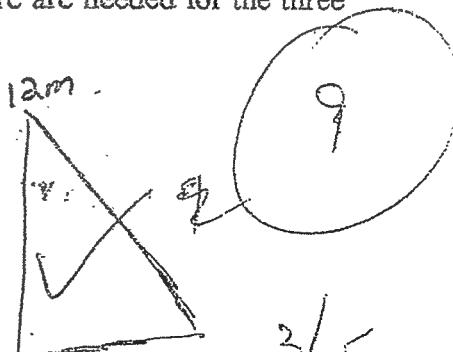

STILL NOT RIGHT !   WAKE UP !

<u>QUESTION 7</u>   <u>AREA AND PERIMETER</u>

1. Find the perimeter of:

4 cm

8 cm

2cm UNNECESSARY

18 cm² ✗

2. Find the area of:

a)

PLAIN STUPID

2km

4.3km

20004.3 km ✗

b)

5m

7m
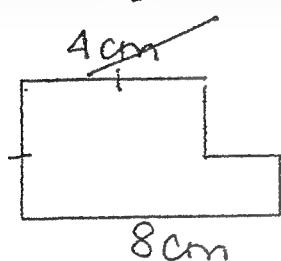

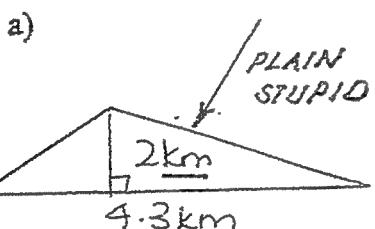

10m
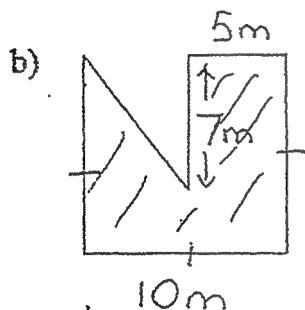

35 m ✗

WHAT OUR STUDENTS LEARN AT SCHOOL:
A STATEMENT BY THE GOVERNMENT OF NEW SOUTH WALES

Our schools exist to provide the basic skills and competencies that <u>our children need to cope with the world now</u>, with the next level of education and <u>the world beyond</u>. With family, household or community support, a student properly taught will develop respect for scholarship and will acquire the joy of learning.

In primary school children will learn:

1. *How to read:* The passport to all knowledge and the glories of all the world's literature.

2. How to write: <u>They will learn</u> how to express themselves in proper sentences and paragraphs <u>strictly in accord</u> with the <u>rules</u> of grammar and syntax. They will learn to handwrite fluently and gain the skills of the keyboard.

3. Mathematics: The development of <u>mental skills in</u> dealing with numbers and problems and the application of those skills to the use of calculators and computers as part of a child's understanding.

THANK ALLAH   *MOST KIDS CAN WALK & TALK BEFORE THEY GO TO SCHOOL.*

IF WHAT WAS SAID WERE IMPLEMENTED, EVERYONE WOULD BE A GENIUS.

It is each school's obligation to respond to differentiated abilities with differentiated education programs. *MORE PUPIL-FREE DAYS.*

BY THE TIME STUDENTS HAVE SOLVED THE RIDDLE, THEY HAVE FORGOTTEN WHAT THE TOPIC WAS.

Similarity

YEAR 8

Two shapes are said to be
similar if they have the
same shape.
That is all corresponding
angles are the same size
and corresponding sides
aren't necessarily equal
but in the same ratio SO WHAT?

We are now able to use
Pythagoras Theorem to find the
unknown side if it is the longest
side, or one of the short sides.
"Draw an arrow from the right
angle to the hypotenuse" ?

If it is a letters add $c^2 = a^2 + b^2$!!

OR If it is a number minus $a^2 = c^2 - b^2$??

As with any prism
to find the volume.
simply find the area
of the end and multiply
this by the height of the prism

CAN WE NOW DO IT?

We already know that a ratio is
rates of 2 quantities. A rate is a type
second quantity is always 1

a comparison
tio but the

© A ratio is a comparison of 2 like quantities.
In the example above we're comparing the volume of
cordial needed to mix with the volume of water.

STILL BREASTFEEDING IN YEAR 12

DO YOU UNDERSTAND ?   YES , YES , YES .

CAN YOU NOW DO IT   ?   NO , NO , NO .

THERE IS NO CLICK, HENCE NO LEARNING

NECESSARY WORKING ?. NO! COMPULSORY INCOMPETENCE.

(v) If a quantity is to be

increased by 16%, we multiply it by $(100 + 16)\% = 116\% = 1.16$;

decreased by 16%, we multiply it by $(100 - 16)\% = 84\% = 0.84$.

When \$839 is increased by 16%, we obtain \$(839 × 1.16); when in turn this quantity is decreased by 16%, the result is \$(839 × 1.16 × 0.84). Using a h.c., final answer = \$817.52 # (to nearest cent).

BLAA, BLAA, ...

{Alternatively, we could obtain \$839 × 1.16 = \$973.24 (h.c.)(i.s.) and then use the memory before multiplying by 0.84.}

Using the codeword SOHCAHTOA in the right-angled triangle ABC, in which B = $90°$, then

$\cos A = \dfrac{AB}{AC} = \dfrac{6}{7}$ and $\therefore A = 31°$# (h.c.) to nearest $°$. YEAR 9

By Pythagoras' Theorem, $BC^2 = AC^2 - AB^2 = 7^2 - 6^2$

$\therefore BC = \sqrt{49 - 36} = \sqrt{13} = 3.61m$ #, to 2 dec. places YEAR 7
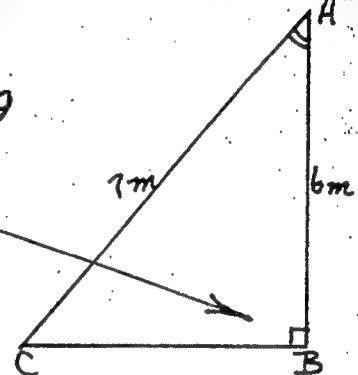

{_Alternatively,_ $\sin A = \dfrac{BC}{AC} = \dfrac{BC}{7}$, $\therefore BC = 7\sin A = 3.61m$ †

or $\tan A = \dfrac{BC}{AB} = \dfrac{BC}{6}$, $\therefore BC = 6\tan A = 3.61m$ †

† _Note, we use the calculator display for A, from (a), rather than the approximation A = $31°$._}

THIS BRILLIANT AUTHOR CAN'T SHUT UP !

(a) $(\tfrac{1}{2})^2 + (2\tfrac{1}{2})^3 = \tfrac{1}{4} + (\tfrac{5}{2})^3 = \tfrac{1}{4} + \dfrac{125}{8} = \dfrac{2+125}{8} = \dfrac{127}{8} = 15\tfrac{7}{8}$ #

OR, _by calculator_

$(\tfrac{1}{2})^2 + (2\tfrac{1}{2})^3 = (0.5)^2 + (2.5)^3 = 0.25 + 15.625 = 15.875$ #

(b) Noting the Index Rule, $a^{-n} = 1/a^n$, then $2^{-3} = 1/2^3 = 1/8$

Thus $3^2 + 2^{-3} = 9 + \dfrac{1}{8} = 9\tfrac{1}{8}$ _or_ $3^2 + 2^{-3} = 9 + \dfrac{1}{8} = 9 + 0.125$ (h.c.) $= 9.125$ #

STUPID ! WHAT ELSE; LAWNMOWER ?

By _multiplying both sides by x or by cross-multiplying,_

$\dfrac{x-1}{x} = 5$, i.e. $\dfrac{x-1}{x} = \dfrac{5}{1}$ then x-1 = 5x   YEAR 8

e. -1 = 5x-x, i.e. -1 = 4x, i.e. 4x = -1, i.e. x = -1/4 #

PERCENTAGES

Discount

When goods are bought or sold they are sometimes offered at a reduced price. The reduction in price is called a *discount* and is usually expressed as a *percentage* of the marked price.

Example

A television set is marked at $400. The electrical store is offering 10% discount at their sale. Find
a) the discount in dollars;   (b) the amount paid for the television set.

Solution

a) Discount = 10% of marked price   (b) Amount paid = Marked price − Discount
$$= 10\% \text{ of } \$400$$ $$= \$400 - \$40$$
$$= \frac{10}{{}_1\cancel{100}} \times \frac{\cancel{400}^4}{1}$$ $$= \$360$$
$$= \$40$$

SHOW WORKING COMPULSORY
INCOMPETENCE: 1 MARK

Discount = percentage of the marked price
Amount paid = marked price - discount (in dollars)

Commission = 12% of $800
$$= \frac{12}{{}_1\cancel{100}} \times \frac{\cancel{800}^8}{1}$$
$$= \$96$$
The salesman earns $96.

ATHLETIC

THIS IS WHAT YOU HAVE TO DO WHEN YOU ARE JACK OF ALL TRADES, BUT MASTER OF NONE! (SPIRAL CURRICULUM). MENTALLY: 12 × 8 = 96

Many percentages involve fractions.
Consider $3\frac{1}{2}\%$.
% means $3\frac{1}{2}$ out of 100 and written as a fraction, is $\frac{3\frac{1}{2}}{100}$.
Now $\frac{3\frac{1}{2}}{100}$ can also be written as $3\frac{1}{2} \div 100$.

$$\frac{3\frac{1}{2}}{100} = 3\frac{1}{2} \div 100$$
$$= \frac{7}{2} \div \frac{100}{1} \quad \text{writing as improper fractions}$$
$$= \frac{7}{2} \times \frac{1}{100} \quad \text{inverting second fraction and multiplying}$$
$$= \frac{7}{200}$$

Therefore $3\frac{1}{2}\% = \frac{7}{200}$.   *A PURPOSELESS EXERCISE.*

ONLY IN MENTALS LIKE

12½% OF 96

THINK WRITE
⅛ OF 96 = 12

SHOW WHAT IT DOES, NOT WHAT IT IS.

Thus 9% is read nine percent and means *nine out of one hundred.*

RESISTANCE TO CHANGE
IF A SHIRT COSTS $20, DON'T TELL ME HOW MUCH IT IS IN PESETAS.

Since 9% means 9 parts out of 100 parts, 9% can be written as $\frac{9}{100}$.

Similarly 10% means 10 out of 100 and can be written as the fraction $\frac{10}{100}$.

However the fraction $\frac{10}{100}$ can be simplified.
$$\frac{\cancel{10}^1}{\cancel{100}_{10}} = \frac{1}{10} \quad \text{cancelling by 10}$$
Therefore $10\% = \frac{10}{100} = \frac{1}{10}$

YEAR 8: HOW MANY TENS IN 100.

$$60\% = \frac{\cancel{60}^6}{\cancel{100}_{10}} \quad \text{60 out of 100, cancelling by 10}$$
$$= \frac{\cancel{6}^3}{\cancel{10}_5} \quad \text{cancelling by 2}$$
$$= \frac{3}{5}$$

SPOON FED DISCOVERY

WHY SHOULD IT?

PURPOSE: (MENTALLY) 60% OF 125 THINK ⅗, SAY 75

A percentage is indicated by the symbol % and means a fraction out of one hundred.

E.g. 11% = 11/100

The fraction should be written in simplest form.

E.g. 5% = 5/100 = 1/20

ROTE LEARNING

116.

In a class of 32 students 6.25% wear glasses, and $12\frac{1}{2}$% are blonde. Find how many students wear glasses and how many are blonde?

THIS IS WHY BOOKS GET THICKER:

$$\frac{1}{8} \text{ OF } 32 = 4$$

Solution

Number of students who wear glasses = 6.25% of 32

$$= \frac{6.25}{100} \times 32$$

$$= 0.0625 \times 32$$

$$= 2$$

YEAR 7

$$\begin{array}{r} 0.0625 \\ \times \quad 32 \\ \hline 1250 \\ 18750 \\ \hline 2.0000 \end{array}$$

$6.25 \times .32$
(CALCULATOR)

Therefore 2 students in the class wear glasses.

Number of students who are blonde = $12\frac{1}{2}$% of 32

$$= \frac{12\frac{1}{2}}{100} \times 32$$

COMPULSORY

CRUTCH FIGURES

$$= (12\frac{1}{2} \div 100) \times 32$$

$$= \frac{25}{2} \times \frac{1}{100} \times \frac{32}{1}$$

$$= 4$$

Therefore 4 students in the class are blonde.

SILLY. BESIDES, NOT MANY CAN DO IT.

To find a given percentage of an amount:
(a) write the percentage as a fraction;
(b) multiply by that fraction.
E.g. 25% of 80 = 25/100 x 80 = 20

MENTALLY:
THINK $\frac{1}{4}$,
SAY 20

30% shaded

YOU HAVE TO SEE IT TO BELIEVE!
THIS IS WORSE THAN THE WORST IRISH - OR ETHIOPIAN JOKE!
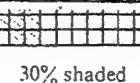

To find the percentage unshaded we must find 100% − 30%

$$100\% - 30\% = \frac{100}{100} - \frac{30}{100}$$

$$= \frac{100 - 30}{100}$$

YEAR 7

$$= \frac{70}{100}$$

$$= 70\%$$

IS THIS EXCELLENCE IN TEACHING AND LEARNING?

Now   shaded part + unshaded part = whole
i.e.   30%   +   70%   = 100%

SAFE , CHALLENGING AND CREATIVE SCHOOLS.

Thus to calculate the unshaded part we could have subtracted the percentage shaded from the whole.

i.e. percentage unshaded = 100% − percentage shaded

$$= 100\% - 30\%$$

$$= 70\%$$

$$\frac{11}{300} = \frac{11}{300} \times \frac{100}{1}\% \quad \text{multiplying by } \frac{100}{1}$$

$$= \frac{11}{3}\% \quad \text{cancelling by 100}$$

$$= 3\frac{2}{3}\% \quad \text{expressing the answer as a mixed number.}$$

MENTALLY: $\frac{11}{3} = 3\frac{2}{3}\%$,
BUT WHY?

A percentage may be expressed as a decimal.
Consider 12.5% $= .125$ *ROUTINE*

12.5% means 12.5 out of 100 and written as a fraction is $\frac{12.5}{100}$.

However fractions must have whole numbers in both the numerator and denominator. Therefore we must find an equivalent fraction with whole numbers:

$$\frac{12.5}{100} = \frac{12.5 \times 10}{100 \times 10} = \frac{125}{1000}$$

Simplifying, $\frac{125}{1000} = \frac{25}{200}$

AFTER ALL THIS

$$= \frac{5}{40}$$

$$= \frac{1}{8}$$

Therefore $12.5\% = \frac{1}{8}$

$$\frac{3}{20} = \frac{3}{20} \times \frac{100}{1}\% \quad \text{multiplying by } \frac{100}{1}$$

$$= \frac{15}{1}\%$$

$$= 15\% \quad \text{cancelling by 20}$$

$3/20 \text{ OF } 60 = 9$

MENTALLY: *BUT WHY?*

$$\frac{7}{12} = \frac{7}{12} \times \frac{100}{1}\%$$

$$= \frac{175}{3}\%$$

$$= 58\frac{1}{3}\%$$

WHY CONVERT
$\frac{7}{12} \text{ OF } 48 = 28$

117.

St Monica's plots future

HOW ON EARTH CAN YOU PLOT THE FUTURE IF YOU DON'T EVEN SEE HOW BAD THE PRESENT IS?

RICHMOND'S ST Monica's Primary School community came together for a celebration Mass last week to mark the launch of the school's mission document of aims and goals.

Celebrated by parish priest Father Michael O'Callaghan, the occasion was a milestone for the school, setting out its philosophies and plans.

Special guests included Macquarie MP Kerry Bartlett, Londonderry MP Paul Gibson, Chisolm Catholic School Principal Ian Jordan, representatives from the Catholic Education Office and parent groups.

The Mission Document is based on five main ideas: the celebration of faith; dignity of each person; support for learning; building partnerships; and providing excellence in teaching and learning. School principal John Laffin said teachers, parents and students had taken 12 months to prepare the document.

He said the mission statement was a response to a Catholic Education Office document, "Touching the Future". A three-year structural plan would now be put in place to help the mission statement become reality.

With some of those major interruptions to the classroom routine behind us, it is time to settle down to our routine. Let's all make a big effort to do our best work and really concentrate on our learning. We have a lot to do this term and everyone needs to work hard. It is extra important that everyone is cooperative - I *know* you can do it! With this week's homework you will receive your homework assignment. It should not take you long, but please present it in a way that we can display it in the classroom as a part of our HSIE Aboriginal Studies. Don't forget reading record cards and homework for marking on Friday. I'm looking forward to a *VERY PRODUCTIVE* week from *EVERYONE!!! DESPERATE ATTEMPT.*

A DISASTROUS DISCOVERY !

Basic Skills and Number

Ordered Pairs and the Number Plane

A number pair (x, y) is used to refer to each point on the number plane. The first number x is the reading on the x-axis; the second number y is the reading on the y-axis.

MASTERY TEST

Keep doing this test until you get all questions right.
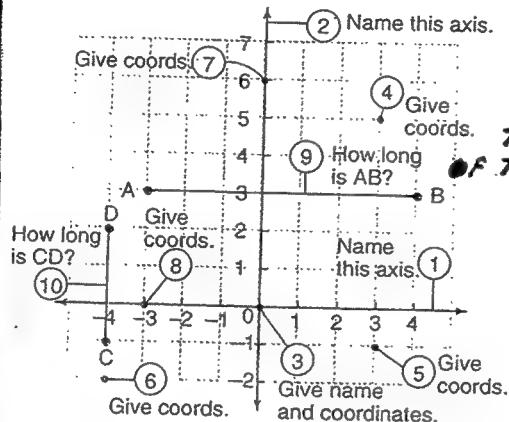

TELLING INSTEAD OF TEACHING!

The x-reading always goes first.

HOW TO REMEMBER: ALPHABETICAL ORDER! (x, y)

(2) Name this axis.
(7) Give coords.
(4) Give coords.
(9) How long is AB?
(1) Name this axis.
(8) Give coords.
(10) How long is CD?
(3) Give name and coordinates.
(5) Give coords.
(6) Give coords.

Fun Spot 1:07   Battleships: a number plane game

- This game is between two players who know how to mark points on a number plane. Each player has a navy of five ships as shown in the diagram. Each of these five ships is drawn onto a number plane, that extends from −5 to +5 on each axis, without the opposing player seeing their positions.
- Players then take in it turns to call out a pair of coordinates, for example (−3, 2). This would be a 'miss' on the number plane shown, and so the opponent would call out 'miss'.

$= \frac{47}{30}$
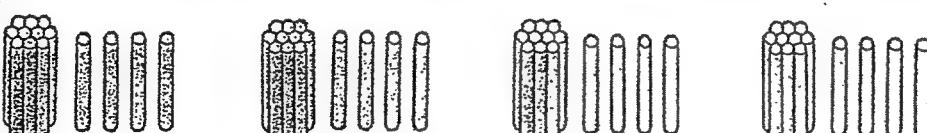

56 divided by 4 is 14. | *OLD MATHS! SAME ANSWER*

The text is designed basically for a year 9 course and is suitable for students with a wide range of abilities. Each topic is introduced from first principles assuming little pre-knowledge. *!*

'What is the right way to teach mathematics?'
THE PRACTICAL & PROFESSIONAL ONE
People perceive mathematics as the subject where you always should get a right answer. However, there is no one right way of teaching and learning mathematics. An approach that works for one teacher or child may not work for another. The methods adopted when you were at school may not be right for your child. Teachers and children are all individuals. Nobody wants a rigid system where they are all required to be the same.

$5^2 = 25$ and $10^2 \div 2^2 = \frac{10^2}{2^2} = 25$
$\therefore 5^2 = \frac{10^2}{2^2}$
But $5 = \frac{10}{2}$ ← *REALLY*
$\therefore \left(\frac{10}{2}\right)^2 = \frac{10^2}{2^2}$

Division

Long before they begin school, children are involved with sharing. They solve problems such as 'I have 12 jelly babies to share among 4 children. How many jelly babies will each child get?' or 'I have 13 jelly babies to share among 4 children. How many jelly babies each?'

However, sharing is only one of the two aspects of division which your children meet. The other is called grouping.

Sharing

Problem: I have 20 jelly babies to share among 4 people. How many will each person get?
Materials:
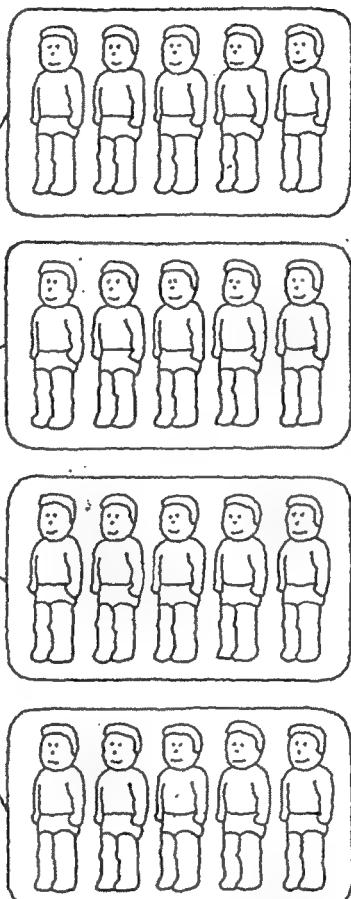

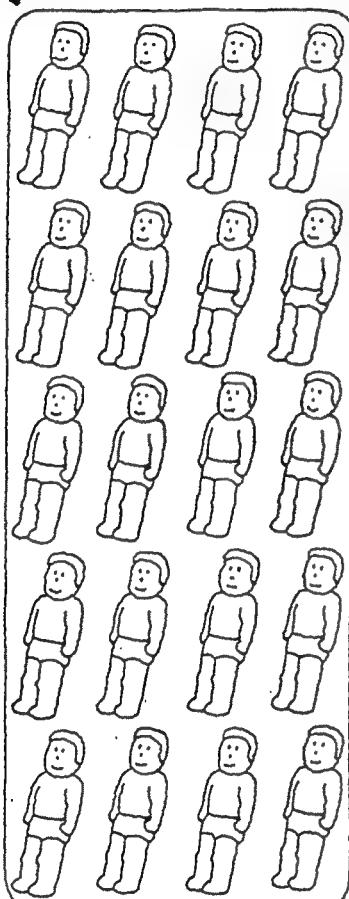

Grouping

Problem: 20 children are going to a picnic in cars which can take 4 children each. How many cars will be needed?
Materials:
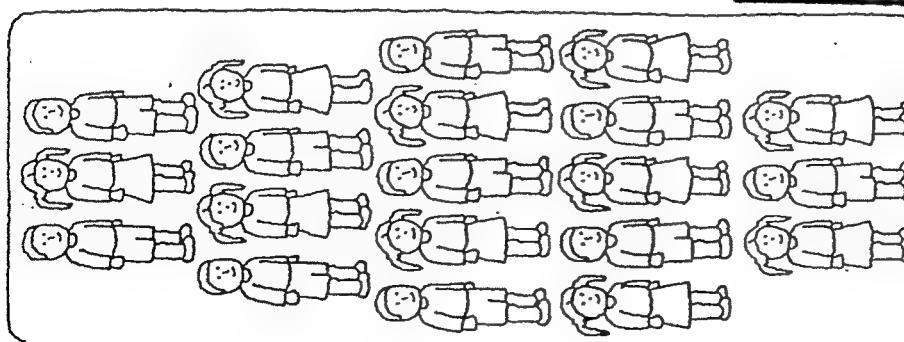

What about remainders in division? In real life, children often meet situations where remainders occur. Take the above situation, where 13 jelly babies were to be shared among 4 children. Each child will receive 3 jelly babies and there will be 1 left over. This is recorded in the following manner:

WHEN Leon starts kindergarten this week, he will already know how to write his name, count to 100 and write numbers up to 20. *BIG DEAL!*

That's more than a lot of parents would have learned in their first year at school. And five-year-old Leon is no progidy — most of his classmates will be able to match him.

The generation gap will continue so that by the end of the year they will have learned more than their parents covered in their first two years of school.

THEN THE RESCUE SQUAD AND HAS TO COME IN!

ConfusEd?

Our range of tuition options is tailored to suit your ability, budget and timetable.

$$20 \div 4 = 5$$

A MATHS program aimed at helping teachers identify and focus on children struggling to grasp basic concepts will go on trial in 10 NSW schools this year. *RESCUE SQUAD*
If successful, the Count Me In program will become part of the NSW public school's early intervention program.

69.

GENERAL INSTRUCTIONS

1. Read all the questions <u>carefully</u> and answer the question which is asked. Plan your time!

2. If given a choice of questions, <u>ensure</u> that you follow the instructions and answer what is required.

3. <u>Write your answers neatly and clearly - untidiness could incur loss of marks</u>

AFTER YEARS OF EARLY CHILDHOOD EDUCATION & NEGLECT

4. If you have a question or other problem, raise your hand and a supervisor will come to you. <u>DO NOT stand up or leave your seat.</u>

5. <u>Cheating in any form will be viewed very seriously</u> and could lead to at least total loss of marks for that paper.

6. Pens, pencils, rulers, calculators etc. are totally your responsibility - borrowing from another student <u>WILL NOT</u> be permitted.

Open book examination?   ~~YES~~/NO

TEACHERS OR DESPERADOS?

$x + 11 = 27$ $x = 16$ ✓	$p - 5 = 2$ $p = 7$ ✓	$\frac{n}{4} = 8$ $n = 32$ ✓	$\frac{a}{3} = -2$ $a = -6$ ✓

This is not how we learned it in class

USUALLY, MENTAL EXPERTISE IS PENALISED!

Regrouping with Subtraction

♛ When you cannot subtract the bottom number from the top number, this is what you must do: *EXCELLENCE:*

GET KIDS TO THINK LIKE AN OCTOPUS.

ORWELL: OLD SPEAK
Subtract.

$$\begin{array}{r} 45 \\ -17 \\ \hline 28 \end{array}$$

NEWSPEAK
Regroup.

tens	ones
3	15
₄	₅
-1	7

In subtraction, regrouping means to borrow.

THE SMOTHERING TEACHER

WHAT'S IN A NAME? MORE EXAM QUESTIONS!

1. *THE EXPLANATION OF NEWSPEAK IN OLDSPEAK SO NOW WE HAVE TWO NAMES FOR ONE THING!*

2. *WHAT'S THE QUOTIENT OF 12 AND 2? 12 ÷ 2 = 6!*

COMPULSORY CONFUSION

Number pattern problems yes! YEAR SIX

Group exercise

Work together on these number pattern tables. Make number sentences for each table using the frames when the pattern has been discovered. The first one is finished in colour.

$$\triangle + 7 = \square \text{ or}$$
$$\square - 7 = \triangle$$

IDENTIFY THE PROBLEM CLEARLY

Brainstorm together all the possible ways of solving the problem (without criticising any).

Determine the probable outcomes of each alternative.

THE PRECURSOR OF COMMITTEES

Students have been so busy discovering, that their **MEMORY BANK** is still empty. Unfortunately, these poor victims are, of course, to blame, **NOT THE STUPID SYSTEM.** Hence **THIS AUTHORITARIAN REMINDER:**

BASIC NUMBER FACTS

Addition and Subtraction

There are 100 basic addition and subtraction facts contained in the table opposite. You must know each fact.

Note: $8 + 7 = 15$
is read   8 plus 7 equals 15.
$9 - 7 = 2$
is read   9 minus 7 equals 2.

+	0	1	2	3	4	5	6	7	8	9
0	0	1	2	3	4	5	6	7	8	9
1	1	2	3	4	5	6	7	8	9	10
2	2	3	4	5	6	7	8	9	10	11
3	3	4	5	6	7	8	9	10	11	12
4	4	5	6	7	8	9	10	11	12	13
5	5	6	7	8	9	10	11	12	13	14
6	6	7	8	9	10	11	12	13	14	15
7	7	8	9	10	11	12	13	14	15	16
8	8	9	10	11	12	13	14	15	16	17
9	9	10	11	12	13	14	15	16	17	18

HOWEVER, the brain cannot absorb pure data; it has to be seen through the spectacles of an idea. (de Bono)

Make a number pattern from a rule
Complete these tables by following the rule
Rule: $\diamondsuit = 6 \times \square - 2$

synthetic division

```
35)763
   350      10
   413
   350      10
    63
    35       1
Remainder 28 | 21 Quotient
```

$$\frac{763}{35} = 21\frac{28}{35}$$
$$= 21\frac{4}{5}$$

8) 37

Senior Lecturer in Mathematics Education

Since students did not know the basic numberfacts, the HIERARCHY produced the most retarded methods under the banner of NEW MATHS.

THE DOCTRINAIRES & THE INDOCTRINATED

DOCTRINAIRE: A person who stubbornly attempts to apply a theory WITHOUT REGARD TO PRACTICAL DIFFICULTIES.

	AMATEUR NEW	PROFESSIONAL OLD

Subtract. Think of the top number. Take away.

Subtract.

THIS IS ONLY ONE SUM!

$$5372 - 2695 = 2677$$

LITERACY
OR
CORRUPTION?

If the following is the embodiment of the English syllabus, then the Board should be sued for incompetence, for misleading parents and students as well as for obviously supporting a ruthless educational industry because the commercial message contained in the following samples crammed with linguistic atrocities has nothing to do with Literacy.

The artificially created crap based on 50-year old arbitrary assumptions and theories cannot possibly help students to use language proficiently. It does the exact opposite.

The Manufacturers of Needs have discovered that the subsequent learning difficulties will generate a multi-million dollar business.

The Elements of a Play

what we see —
- Scenery / Setting
- Props / Costumes / makeup — [Place / time]
- Expressions of face or body
- Gestures
- Postures & Grouping
- movement

what we hear — voices
- Dialogue — prose / speech / song / poetry / blank verse etc
- monologue / soliloquy
  - content
  - tone — variety; happy, excited, angry, sarcastic, concerned etc, ranging too a humpy g next to poetic highs).
  - pace / tempo (can range from a headlong rush of speech — slow delivery / pauses — silence).
  - pitch (can range from calm to hysterical).

Character —
- traits
- Motivation
- Point of view
- Relationships
- Actions / reactions
- Role or Dramatic Function (Hero / heroine / Villain etc)

Conflict —
- of ideas, characters, events etc
- tension / suspense
- Climax / Anti climax
- Denouement (the conclusion the play which resolves the strong

Narrative —
- Plot
- theme / issues
- scenes

The Elements of Drama

- the beginning
- Contexts / situations / roles / relationships
  driven by
  - dramatic tension
  detected by
  - Focus
    - made explicit in
    - Place — though — time
    - to create — mood which together symbols create the whole experience
    - Drama being

COMPULSORY MARGINS

D) _EDITING_ - _Aviation_

Write the following passage into your homework book. Correct any punctuation that is needed. There are also 10 words that are spelt incorrectly. Write the words with correct spelling and underline them with a red pen or coloured pencil.

aviations histry in our country is full of fasinating people ross and keith smith j m bennett and w h shiers maid the first flite from england to australia in 1919 in 1927 kingsford smith and c t ulm establised a round australia recorde of 10 days 5 hours 15 minites how long does it take today in 1928 thay made the first across the pacfic ocean from usa to australia in a plane called sothern cross

☆☆☆☆☆☆☆☆☆☆☆☆☆☆☆☆☆   How many stars? **74**

47 POOR CHILD!   75

When a word of more than one syllable (occur) ends in one vowel (u) and one consonant (r) AND the accent is on the final syllable (cur), the final consonant is doubled (rr) before adding a suffix which begins with a vowel (ing = occurring).
If the final syllable does not have the accent (happen), or if the suffix begins with a consonant (ment), the final consonant is not doubled (happening, deferment).

This rule looks difficult, but try the word **excel** and the suffix **ent.**

When adding a suffix you keep the y where the y follows a vowel (a, e, i, o, u).

A suffix is a letter or group of letters added to the end of a word to change its meaning. Some suffixes are:

1. Plurals — day + s = days
2. s — obey + s = obeys
3. ing — play + ing = playing
4. ed — annoy + ed = annoyed
5. er — buy + er = buyer
6. ment — employ + ment = employment
7. al — portray + al = portrayal
8. ance — annoy + ance = annoyance

'DON'T WAKE UP A SLEEPING DOG'

In many words letters are silent when you say the word. **Silent letters are written but not pronounced.**

Examples

What good is the h in ghost — or the p in cupboard? You don't sound these letters when you say the word. They are the ghostly silents!

When a one syllable word (run) ends in one vowel (u) and one consonant (n), the final consonant is DOUBLED (nn) before adding a suffix which begins with a vowel (er or ing).
This rule does not apply to words ending in w, x or y.

Set 1	
Silent A	Silent B
bread	bomb
barn	comb
heard	debt
yarn	limb
tread	thumb

Again! The Opposition ALWAYS has the answers. (Carr, then & Piccoli)

Why spelling's not an education write-off

THE question of how spelling should be taught — and indeed whether it is taught at all — has become the latest burning educational issue.

It has even touched off a political debate, with Opposition leader Nick Greiner declaring that a State Liberal Government would act to ensure that spelling was taught properly.

Much of the furore arose from a recent report that the obligatory study of spelling lists was to be abandoned.

The heat was turned up when senior Education Department official Frank Meaney said last week it was not a school's responsibility to prepare children for the workforce.

Industry, Technology and Commerce Minister Senator John Button warned in Melbourne the public education system could never meet the specific skill needs of industry.

And the NSW Teachers Federation acting president, Mr Ray Cavenagh, said most Australians could not spell and businessmen and professionals had avoided the issue for years because they were always able to hire women to do spelling for them.

But the Education Department says this does not mean that spelling itself is being ignored.

Much of the confusion arises from community ignorance of the new K-6 writing syllabus now being used in primary schools.

The approach adopted is to treat expression, handwriting and spelling not as separate subjects, but as skills which must be unified in the writing process.

Children are encouraged to work in groups on particular projects such as writing reports, letters or stories.

They begin by researching the subject, exchanging ideas and then drawing up a rough draft. At this stage it does not matter whether the handwriting is poor or words are misspelt. The children then must edit the work and make any corrections necessary.

This usually involves making a fresh draft and checking on the spelling of any words which may be incorrect.

They then produce a final version for "publication", which is expected to be neatly written, well and logically constructed and correctly spelt.

In this process the children learn how to spell incidentally. It often happens that they learn to use far more difficult and demanding words than they would have encountered in the regular spelling lists because these words are relevant to their projects.

ENGLISH

English is . . .

- talking, listening, reading, writing, studying media and a wide range of literature

- learning to communicate and interact in a variety of situations

- developing the ability to respond critically and thoughtfully to all kinds of written and spoken forms

Skills in English are best developed when:

- students feel confident that they are free to express an opinion

- students feel that their opinions are valued **SEE PAGE 74**

- there is consistent encouragement of effort and help is provided when needed

177

yesterday me and Shrane

[illegible handwriting]

PRACTISE WHAT YOU TEACH!

Kindergarten to Year 12

Talk

- talk with your child; help them develop and express opinions and reasons for those opinions; talk about what you see and hear together

Interest

- take a sympathetic interest in your child's writing: encourage them to talk to you about what they have to say before they write

Listen

- listen to your child

Read

- encourage and promote the habit of reading by reading yourself; provide books, magazines, newspapers and brochures to stimulate your child's interest in the written word; read to and with your child and talk about your reading together.

The underlined words in the following sentences are spelt incorrectly. Write the proper spelling in your exercise book.

1. The gymnast gave a beautyful performance.
2. It is only by appling themselves to dayly exercise that Olympic athletes succeed.
3. Many storyes of courage and self-denyial come out of the Olympic Games.
4. A good emploier will give an athlete time off to attend the Games.
5. Every morning the cleaners tidyed the running track.
6. The exhausted runner was carryed from the track.
7. The Australian sailing team displaid great skill.
8. The wrestler closely studyed his opponent's form.

How YOU can help your child in English:

Early Childhood

THE CURE FOR INCOMPETENCE

Praise

- praise and concentrate on the positive aspects of your child's work: correction of spelling and grammar, unless requested, could inhibit the development of confidence

Talk

- talk to the teacher about any concerns your child may have

Interact

- provide situations or activities in which your child will have the opportunity to talk to and interact with others

Read

- read to your child as often as possible; join a library; talk about the books you read; make up stories together; encourage your child to retell stories or incidents to other members of the family

Create

- encourage imaginative play by providing ... and materials which lend themselves ...

THE EXCUSE!
It's a Commercial **Year 4**

NARRATIVE

Bike Safety
Read the narrative about bike safety aloud.

Tess was so excited. It was her birthday and she was going with her dad
to **buy** a new bicycle. Eagerly, she looked around the **bicycle** shop
and at last decided on a blue and silver **mountain** bike.

"We have to buy a helmet, too," she reminded Dad.
"Make sure you choose a brightly coloured one," advised the
salesman. "You will be seen more easily by drivers."

Tess chose a bright yellow helmet. "That's a good choice,"
commented the salesman. "Try to do most of your riding in the
park or on proper cycle tracks. Only ride on the road when you
really need to. If you do ride on the road, keep a watch for traffic
and as well be careful of the broken edges of the road. Look out for
parked cars, too. Do you think you can remember all that?"

"I'm sure I can," smiled Tess, as she wheeled her bike from the shop.

SPELLING   *where, what for*   *THE CHORE*

TRIVIA FOR HOMEWORK

Another Treasure Hunt

Trivia Treasure Hunt: Five-pointers

1. Write the lyrics to a TV ad that is sung.
2. Write the name of an Australian swimmer. *Kieren Perkins*
3. Bring along a photo of you playing sport.
4. Bring along a coin from a foreign country.
5. Bring along a trophy won by a member of your family. **CRAP**
6. Paste a *Hagar the Horrible* comic strip into your workbook. **CRAP**
7. Copy your grade 3 school report into your workbook. **CRAP**
8. Name the winner of the 1930 Melbourne Cup.
9. Bring along a photo of the Australian Prime Minister from a newspaper or magazine.
10. Draw your favourite rock star. **CRAP!**

Here's another treasure hunt for you. Collect as many of the items and answers to the questions as you can. Bring them all along on the date decided by your class. An appropriate prize may be awarded to the winner.

Maths Moments: Two-pointers

Solve these maths questions for two points each.

1. Double 1.95. *3.90*
2. Multiply 234 by 41. *9224*
3. Divide 45 000 by 15. *=3000*
4. What number is 200 000 less than 1 090 678?
5. What number is 60 000 more than 1 556 900?
6. What time is it if 67 minutes ago it was 1:05?
7. What is 40% of $96.00?
8. How many millilitres are in 2¼ litres?
9. Write the number 200 090 in words.
10. What woud you pay for a $2400 piano if you were offered a 10% discount?

Spell-check: One-pointers

Each of the words on this list is misspelt. Collect one point for each word you spell correctly.

1. monkies *monkeys*
2. mosquitoe *mosquito*
3. Hawai *Hawaii*
4. avacardo *avocado*
5. rythm *rythm*
6. pharoah *pharaoh*
7. center *centre*
8. disgappear *disappear*
9. ardvaark
10. cemetary *cemetery*

HOW

CAN THEY

WHEN

TEACHERS

DON'T

TEACH IT?

Schools forced to prove literacy

By KATRINA BEIKOFF
Education Reporter

ALL Australian schools will be forced to publish details of their students' literacy under a new drive by the Federal Government, which will cut education funding to states that refuse to tow the line.

From next year, schools producing illiterate children could lose funding unless they can show they have programs in place to improve each child's literacy skills, under measures announced by Federal Schools Minister David Kemp yesterday.

This follows a report — dismissed by the states — showing about one in three primary children effectively are illiterate.

Dr Kemp's changes effectively could override a deal struck between the Teachers Federation and the NSW Government, under which annual school reports were not to contain literacy information that would allow a comparison of schools.

Dr Kemp said every school would have to publish the results of Year 3 and Year 5 students' literacy skills from next year. The results will be graded against national standards.

And, while the states control education, they will suffer federal funding losses cuts for schools that fail, or make an inadequate effort, to meet the standards.

Dr Kemp said the publication of the results, tied with the threat to withdraw funding currently worth $600 million a year, was the only way to improve national literacy standards.

"The schools and states will be require put forward a det plan to inform the C monwealth what will be doing to en students are brough to the maximum s dard," he said. "We can't go on pou money into that bu [literacy funding] not finding out whe or not it is working."

A national study year of 7454 childre Year 3 and Yea showed about a thi students could not or write properly.

Australian Counc Education Research sociate director Dr C Masters said yeste the standard used i study was a benchr for being literate, students who did reach it would be sidered illiterate.

Dr Kemp said prir curriculums should cleared to allow teac more time to con trate on literacy.

"Every child who ters school next ought to be literate in four years," he sa

"And if they're we're failing them we will know becaus results will be publi against the nat standard."

But the NSW Gov ment called Mr Ke plan a "smokescreen cutting education f ing to the states. cation Minister Aquilina said the st finding of mass illite was exaggerated an Federal Governr was "contributing ing but threats".

Teachers attacke Federal Governm "an outrage" tha a spectacle out o children's abiliti threatened to cu to the most need.

Miranda Devine

197.

Minister lets a bird out of its 'kage'

FEDERAL Schools Minister David Kemp yesterday revealed what he claimed was evidence to prove the states were accepting low literacy standards.

He released an example of writing to show the standard expected of Year 3 students based on draft national benchmarks (top sample), which he wants NSW to enforce.

And he released an example of Year 3 writing (bottom sample) he said

was currently of an acceptable standard to the NSW Government. This piece of writing was only of a level 2 standard based on a national survey of Year 3 students which rated skills from 1 to 5, with 5 being the highest rating.

Dr Kemp said it was clear from this sample that the NSW Government was prepared to tolerate a lower than satisfactory standard of literacy in spelling and sentence construction.

NO WONDER
Students with HSC fail

Mr Brian Bailey, a senior lecturer in communications at the college, said the part-time, mature aged students were more literate than the full-time students with the Higher School Certificate.

Top pupils fail test in literacy

ABOUT half the students [ad]mitted to bu[si]ness courses at Nepean College of Advanc[ed] Education failed a literacy test.

The college had to test new business students for [lite]racy skills before admitting them to the School of Busi[ness] Studies this year.

This is because the college has found a large [num]be[r of] students hindered in their studies because of an appal[ling] lack of literacy.

About half the potential students failed a literacy [test] at the beginning of this year.

These students had to study a course on English s[kills] before starting their business studies.

Nepean's problem was highlighted at a two-day nati[onal] conference of business communication teachers the[re]

H) Read this passage:

Jill's large class visited the circus yesterday. Susan and Tim really enjoyed the beautiful, white horses who pranced gracefully around the ring. Sam was amused by the antics of the naughty monkeys as they skillfully climbed the bars of the cage. Mrs. Green gave everyone chocolate ice-creams, on the way home and everyone talked about the fun they had at the circus.

Parents graduate in literacy teaching

SIXTEEN proud parents attended their own graduation recently, after eight weeks of a literacy teaching course.

The parents stepped forth to accept their Talk To A Literacy Learner (TTALL) certificates at Windsor South primary school where the course was held.

Co-ordinator Annette Judge said TTALL emphasised the partnership needed between the home and school in assisting the development of student skills.

"The course was really designed to reinforce the idea that education is moving into local communities," Ms Judge said.

"It involves not just teachers and students, it also involves parents." Throughout the intensive course parents were informed about how children learn to read and write.

They were also taught the importance of their role before their child's school enrolment.

Ms Judge said the group not only worked well together but forged strong friendships and enjoyed the course.

To graduate the parents had to complete a final project, to be displayed at the school.

Ms Judge anticipated a night course jointly run by Windsor South public and Bligh Park public school, would be held.

TO PERPETUATE THE RUBBISH (handwritten)

IN TEACHING THE SAME CRAP (handwritten)

Part the dark dark ... there was a dark dark forest and in the dark dark forest there was a dark dark path and down the dark dark path there was a dark dark house and in the dark dark house there was a dark dark Hall and in the dark dark Hall there was a dark dark cupboard and in the dark dark cupboard there was a ghost

boo   186.

THIS YEAR 9 BOY WILL EVENTUALLY HELP HIS KIDS

Teaching and Learning Together

Stupidity No. 9: The Assignments, The Projects, The Homework, The Written Comprehension exercises; copied chores done with the help of tutors, parents, brothers, sisters and friends. Although they are presented as a modern way of doing things, they are, in fact, the result of the teachers' inability to teach and the inability of T. V. addicted, lolly-sucking, dry noodles-munching children to study. Great civilisations have disappeared; we are well on the way of being mentally annihilated.

Since children will be in trouble if they don't do the prescribed work, parents are, once again, conned into helping, not only their children, but also to perpetuate the rort according to the new slogan, "Teaching and learning together."

Written comprehension exercises are, of course, useless because answers have to invariably be discovered by going over the text again; it is actually a sneaky way to make the child read it. Questions like, "what is the colour of John's car and what is the name of his girlfriend", have nothing to do with comprehension.

The ultimate stupidity, ignorance, or sabotage is to deny the student to train his memory. Children are so used to having to answer questions in writing that they simply wean themselves from taking in what they read.

The Water Nymphs

The people of Tralee were all dancing merrily on the green to celebrate the coming of spring, when there suddenly stepped into the firelight three beautiful young maidens clad in flowing white gowns, with water lilies and roses entwined in their hair. (From: Celtic tales of the Strange; Joanne Asala; Sterling.)

Apart from the reason mentioned before, why can't children remember?

2. The prose is like Double Dutch to them; they are so used to crap like this:

Can you remember how many eggs the goose was sitting on ? _____
What happened to them ? _All_ _hatched_ _except one._

A noun names a person, place or thing : ***NOW WHAT ?*** ***181.***

THAT'S WHY MANY PEOPLE

Write out the sentences, changing the words in italics to words that have the opposite meaning.
Choose your words from this list:

OPPOSITES (1)

Fingers firmly gripping the thin shaft of a quill pen, many a student in an early American school labored over his copy book, tracing the elaborate dips and swirls of the ABCs and struggling with the accompanying writing exercises.

Each page of the large, clothbound text contained examples of the exacting script of the teacher. On blank lines below the teacher's writing, the students meticulously sought to achieve the same effect, repeatedly tracing garnished letters of the alphabet and copying sentences of a relentlessly uplifting tone. Hour after hour they toiled, and some of the more gifted among them ultimately went on to achieve calligraphy so ornate as to be virtually unreadable.

The reward for this drudgery was the book itself, page upon page of the most elegant penmanship, often cherished for years by such scholars as Timothy Orne.
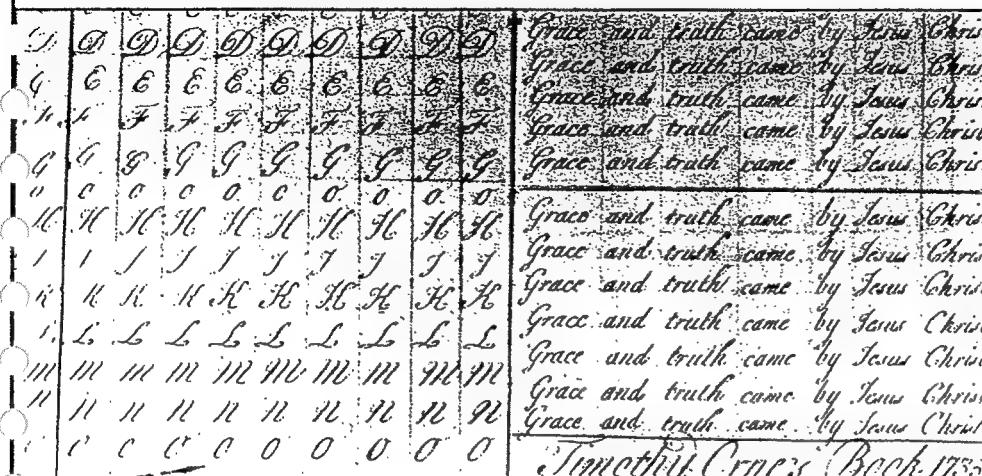

DON'T SCOFF AT THIS METICULOUS PRECISION. ITS DOUBLE MEANING IS CHARACTER BUILDING

WHAT ABOUT THE MODERN VERSION? GARBAGE!

ITS DOUBLE MEANING IS SELLING COMPUTERS TO MAKE UP FOR INCOMPETENCE AND A "SHE'S RIGHT MATE" ATTITUDE

1. READING EXTRACT, SPELLINGS IN CONTEXT

"A DAY AT THE SEASIDE"

The words in heavy print are from current lists, while those underlined are from previous lists.

Every child likes to spend a day at the seaside. Sometimes it is a picnic on a single day, and sometimes it spreads over many days of a long holiday. There is always so much that children can do while playing on the seashore.

I shall tell you how we spent last Saturday having a picnic on the beach. We travelled to the coast by car and arrived just about nine o'clock. Dad found a shady spot near the sand. Mother told us to shower and then put on our swim suits so that we could play on the shore and wander along the sandy beach until the tide was high enough for us to go swimming.

I had brought my bucket and spade with me, so my sister and I decided to build sand castles. I collected some shells and small stones for the fence while Jane dug up the loose sand into heaps. In no time we had built a beautiful castle.

As it was almost time for our swim, Mother told us not to get burnt and to watch out for jellyfish as several children had been stung last weekend. We did as we were told and were careful not to beyond our depth in the water as my sister was not a strong swimmer. I had to assist her when large waves knocked her off her feet. While we were in the water Dad got his camera to take our photos.

We then got ready for lunch. We were both very hungry by this time and looking forward to a hearty meal. We took off our costumes and sat down.

In the afternoon as our parents wanted to read the books they had brought with them. We got our skim boards as we were eager to see if we could use them. We played in the shallow water near the edge of the sand.

When it was time to depart for home we washed the sand from our legs and helped Dad to pack the picnic things into the basket. We then began our journey home after a happy day at the seaside.

A TYPICAL **ADULT** WRITING FOR THE **CHILD**

NO WONDER MOST PEOPLE USE THIS STUPID PRIMARY SCHOOL ENGLISH.

Improve your spelling

Spelling is not easy in English because words are not always spelled as they are pronounced. With only 26 letters in the alphabet and approximately 45 basic sounds, one is bound to have trouble in representing the spoken word in a written form. Because of the deficiency of the alphabet, a single letter is often called upon to represent a variety of sounds, as for instance the letter *a* is doing in *hat, day, call*. A more famous example is *bough, cough, sought, thorough, though, tough, rough*, where the letters *ou* represent seven totally different sounds.

To complicate the matter, the opposite is also frequently true: one sound is spelled in a number of different ways. You might think, for example, of the middle sound in *piece, queen* and *team*. The same sound is also spelled *i* in *machine* and in *intervene*.

Then again, some letters serve no real purpose at all. *Q*, for example, could be discarded quite readily because it only serves the same function as *kw* (quick=kwick); and *x* could be replaced by *ks* (box=boks).

There are other examples of discrepancies between pronunciation and spelling. For example, in the five simple words *parade, sicken, city, melon* and *focus*, the same pronunciation is represented by five different vowels: *a, e, i, o, u*. And in the following eight words, the sound is spelled in eight entirely different ways: *care, rain, gauge, day, matinee, break, vein, they*.

The most frequently misspelled words

This section concentrates on everyday words that cause more than 80 per cent of all spelling errors. Perhaps the four words which cause most difficulty are *all right, coming, receive* and *separate*.

For school children, the most frequently misspelled word might be any of these four or *cycle, description, really, similar* or *writing*.

For office workers, secretaries and business-men, the culprit may be *advertisement, correspondence, definite, effect, an envelope* or *recommend*. Housewives may find trouble with *handkerchief, pigeon, receipt* or *sieve*.

Review these words and the following lists. Learn the words which cause *you* difficulty.

Six words from the list are hidden in the footballs. However, the letters that begin and end the words are shown around the edges of the footballs. Find the six list words.

HOME SCHOOLING

Dear Stage One Parents,

Students in Stage One will participate in a Talking & Listening program this year that includes "News". Students will be given a set 'News' day. The aim of Talking & Listening is to improve children's ability to speak in front of their peers, speak in complete sentences ensuring who, what when, where and why is covered. A list of topics, some related to the COGs unit being taught this term and hints are provided below, this is to help make news more purposeful.

It would be greatly appreciated if you could assist your child to prepare their news, where necessary. Students will present their 'News' on a given day.

Your child's _____ **'News' day is:**

Monday   Tuesday   Wednesday   Thursday   Friday

Thank you for your support and help.

February 2011

Week	Topic	Questions to answer
5	Free Choice	• Talk about or show what you would like
6	Special Toy	• Bring in a special toy and tell why it is special to you
7	Free Choice	• Talk about or show what you would like.
8	Drawing/Painting	• Bring in a painting or drawing you have made. • Tell why you made it and what you like about it.
9	Free Choice	• Talk about or show what you would like.
10	Favourite Movie	• Talk about your favourite movie and why it is your favourite.
11	Easter	• Talk about what your family does for Easter. *PLAY GROUND VOCABULARY*

PLEASE PUT ME ON THE FRIDGE!

SCIENCE | FICTION

THE INEVITABLE — TOTAL REQUEST — $2493.90

The Myer Report (1980)   Of even greater long-term concern, the report argued, was the large proportion (more than 70 per cent) of primary schoolteachers who took no mathematics in their last years of high school. The report was concerned that teachers lacking familiarity with mathematics may educate their students towards a similar unfamiliarity.
